Chapter 1

In A Climate Emergency Fit For A Parasite Economy we explore some of the reasons for doubt regarding the notion of man made global warming. We look at the economic and political forces behind the prominent environmentalist group Extinction Rebellion, the famous activist Greta Thunberg, the mainstream media (MSM) and the intergovernmental bodies who promote global warming alarmism. We also consider the influences behind the globalist movement which has created the perception of the '*climate emergency.*'

Why the Guardian is changing the language it uses about the environment

From now, house style guide recommends terms such as 'climate crisis' and 'global heating'

The once respected Guardian newspaper recently announced an [official house style change](#). It will no longer be using the term 'climate change' and will now be using phrases like '*climate crisis*' and '*global heating.*' This change in language has followed the emergence of the environmentalist group [Extinction Rebellion](#) and the Internet sensation [Greta Thunberg](#) who insist we must act urgently to reduce CO2 emissions if we are to avert global catastrophe. In keeping with this theme the online news outlet the Independent published a story based on a report by the Australian think tank [the Breakthrough National Centre for Climate Restoration](#) predicting huge sea level rises and the [end of human civilisation](#) by 2050. "*Be afraid, be very afraid*" appears to be the MSM mantra.

There's no doubt.

However, the Guardian's change of language also extends to how they refer to those who challenge the alleged scientific consensus on man made, CO2 driven global warming (anthropogenic global warming – AGW.) Anyone who questions the AGW hypothesis is now to be referred to as a “*climate science denier.*” The Guardian are one among many MSM outlets uniformly espousing this rhetoric. This is all supposedly based upon the premise that the science of AGW is ‘settled’ and beyond all reasonable doubt.

Science is not settled by committee. It is based upon evidence and the analysis of empirical data; the scientific method interprets the results of experimentation, searching for consistency, no matter who carries out the experiment; science requires verifiable data analyses and documented observation, always striving for objectivity.

Doubt is the primary principle of empirical science. A hypothesis is formed, tentatively explaining an observation. Apparent global warming for example. The real [scientific method](#) dictates the hypothesis is tested to breaking point. It must be robustly challenged. If no experimental, analytical or observable evidence emerges to refute the hypothesis, only then, after thorough peer review, does it become a scientific theory. Even after it becomes an accepted theory the science is constantly reviewed. If new observations contradicts the theory then it returns to hypothesis status, because the evidence refutes it, while further scientific research is undertaken.

The evidence which contradicts the notion that CO₂ 'causes,' or is even a significant contributor to global warming is extensive. It is important to recognise that climate is constantly changing. By looking back over millennia we can see that climate has fluctuated greatly.

The Greenland Ice Sheet Project (GISP) shows that, in the Northern hemisphere at least, there have been numerous periods throughout geological history when the climate has been significantly warmer than it is today. These changes have been seen throughout relatively recent human history. Over the last 11,000 years global average temperature has varied by as much as 5C, rapidly warming and cooling. By comparing this with estimated CO₂ levels, researchers at the University of Oslo Department of Geo-sciences, led by Professor [Ole Humlum](#), demonstrated that increased CO₂ apparently had no causal relationship to global temperature at all.

The long range weather forecaster and [climate scientist](#) Piers Corbyn challenged the BBC, leading advocates of the AGW hypothesis, and the UK climate scientists at the University of East Anglia to cite just one peer reviewed paper which proves CO2 is the driver of climate change. To date no one has cited any such paper.

Only idiots question AGW

Typically the response from AGW believers is that [it isn't as simple as that](#), as the AGW hypothesis relies upon numerous components, each contributing to the overarching hypothesis. However, the fact remains, that no scientist has published any paper, based upon empirical (measured) data, which firmly established any causal link between CO2 and global warming.

AGW is barely a sustainable hypothesis, let alone a cohesive theory. By insisting that AGW is *'the truth,'* the Guardian's new house style suggests a woeful understanding of empirical science has infested their editorial policy. It appears the Guardian are the science deniers.

However, there is reason to suspect, rather than scientific illiteracy, it is an economic and political agenda which underpins the Guardian's absolute refusal to report science honestly. We'll look at these influences in more detail in Parts 2 and 3.

Something wholly absent from all MSM climate emergency *'alarmism'* is the

economic and political context of the modern CO2 climate change narrative. It is as if the powerful corporate, political and financial forces behind groups like Extinction Rebellion, the IPCC and prominent individuals like Greta Thunberg, are entirely irrelevant. MSM investigative journalism, asking questions of power, is virtually non-existent when it comes to the climate change 'science.' The question is why?

So let's briefly look at some reasons to doubt the AGW hypothesis, explore the power structures driving climate change alarmism forward, and consider if there is more to the AGW theory than just science. We may as well, it is obvious no one in the MSM is going to do it.

Some Scientific Reasons To Doubt AGW

Very broadly the [Anthropogenic Global Warming hypothesis](#) states that man made CO2 emissions add 'an additional amount' of CO2 to the 'greenhouse gases' in the atmosphere. Energy from the Sun first passes through the atmosphere and heats the Earth. The 'greenhouse effect' traps the returning solar energy as it is radiated from the Earth, primarily in the form of infrared radiation.

Additional warming?

This '*additional man made CO2*' absorbs and in turn emits infrared radiation back into the atmosphere in a process called 'positive radiative forcing.' This causes changes in the energy balance in the troposphere (the part of atmosphere we live in on Earth) measured in Watts per square meter (W/m².) Positive radiative forcing means the 'imbalance' produces a heating effect in the troposphere and therefore additional planetary or '*global warming.*'

The AGW hypothesis claims that natural warming is exacerbated and amplified by the '*additional CO2*' emitted by us. Natural climate change occurs no matter what, regardless of our activity. This natural climate cycle's effect, over the last 400 years or so, has been warming. The Earth is currently in a relatively cool period having recently emerged from a mini ice age called the Maunder Minimum. This coincided with extremely low solar activity. As solar activity increased, the planet warmed but, according to the AGW hypothesis, we have significantly increased the rate of this warming and this, say the alarmists, is both unprecedented and dangerous.

It is the envisaged effects of AGW which leads to fears of impending doom. These include melting ice sheets, huge sea level rise, a devastating increase in extreme weather events, food scarcity, seismic population shifts and so on and on.

The first thing to note about the AGW hypothesis is that it assumes the [greenhouse effect](#) is a fact. There is solid scientific reason to doubt it. There is always doubt with good science.

In 1859 the Irish physicist [John Tyndall](#) was credited with first discovering the radiant heat capacity of atmospheric gases, despite the earlier work of Eunice Foote and others. This was soon followed in 1896 by the work of Swedish physicist and chemist [Svante Arrhenius](#) (an ancestor of Greta Thunberg) who more accurately quantified the thermal properties of CO₂ in the atmosphere. However, the greenhouse effect hypothesis was largely ignored by science throughout the 20th century.

The modern AGW hypothesis is largely based upon research of NASA scientist [James Hansen](#) who reinvigorated Arrnhenius' theories and suggested that this CO₂ radiative forcing was 'causing' additional global warming. His work coincided with a number of economic and geopolitical drivers which also support the AGW hypothesis. Something we'll discuss in [Part 2](#).

The problem is 'the greenhouse effect,' as it relates to the AGW, has a number of [unresolved scientific questions](#) hanging over it, most notably from [physicists](#). These include an apparent, relative disregard of convection and conduction as a methods of atmospheric heat transfer; no acknowledgment of atmospheric volume expansion and contraction (pressure differential) as a heat mitigating factor; a seemingly false assumption that global radiative emissions are uniform; disagreement about the radiative baseline; extreme difficulty in even measuring [average global surface temperature](#) and no recognition that global air temperatures can also be explained through the normal thermodynamic properties (thermal gradient) of atmospheric gases, [no greenhouse effect required](#).

According to Hansen and others, CO₂ drives temperature. Therefore CO₂ must rise first, causing temperatures to follow. However, there is significant evidence this is not the case. For example, the Journal Nature [published a paper](#) in 1999 which looked at the Ice core records for the Last 420,000 years in Antarctica. This showed that atmospheric CO₂ levels lagged behind temperature change by

approximately 800 years.

These are just a few of the scientific objections to ‘certainty,’ a wholly unscientific principle, regarding the greenhouse effect, supposedly underpinning of the AGW hypothesis. For example [a recent study](#) by two Ph.D scientists (Ned Nikolov and Karl Zeller) found, what appeared to be, a direct correlations between planetary atmospheric pressure, solar radiance and surface temperature, with the Earth’s surface temperature fitting precisely to the observation. A number of other papers have [supported such findings](#).

The IPCC have stated that current CO2 levels are ‘unprecedented’ in human history. They have used the Ice core records to demonstrate this. Yet again, there is doubt these claims are accurate. Historical CO2 levels need to be calculated using proxies, no one was measuring it until the last century. Ice core data is one method, another is the density of plant stemata, which vary inversely with atmospheric CO2. By looking at accurately dated fossil records, stemata density, and thereby CO2 levels, can be derived.

AGW assumption about historic CO2 could be wrong

When the stomatal records were analysed by scientists from [Stockholm University](#) its showed a massive divergence from the Ice Core CO2 averages. In a 3000 year period, while ice core proxies showed CO2 levels between 235 – 255ppm the contemporaneous stomatal record indicated a range between 170-430ppm. Suggesting not only periods of higher total CO2 but also much greater variability. This brings the IPCC’s claim of unprecedented levels into question.

My point here is not to state one theory trumps another, but rather to highlight the fact that to claim the science of AGW is 'settled' is incorrect. For the Guardian and other MSM outlets to assert all who question AGW are "climate science deniers" is complete gobbledygook. Unless the Guardian is staffed by idiots (highly unlikely) it seems the change of language is designed to convince readers that the AGW hypothesis is a certainty, in the full knowledge that it isn't.

You don't need a Ph.D in physics to wonder if the AGW hypothesis is sound. Simple logic will do. AGW suggests that the additional CO₂ emitted by mankind represents the 'additional greenhouse gas' driving climate change. It states that our industrial activity and energy consumption is the controlling factor for the Earth's climate. That's why we all need to reduce our carbon footprint, pay more tax and have our energy 'usage' monitored by the state.

To consider this we need to be clear about what a 'greenhouse gas' is. NASA, the IPCC and other organisations who support the AGW hypothesis, always report greenhouse gases as primarily composing of CO₂ (carbon dioxide), CH₄ (methane) and N₂O (nitrous oxide). Remember, according to the theory, greenhouse gases are the ones which both absorb and emit infrared radiation, thereby warming the planet, with man made CO₂ allegedly tipping the balance and controlling climate change.

However these organisations consistently ignore the most abundant greenhouse gas H₂O, the [water vapour](#) which eventually forms clouds. The AGW hypothesis states that rising global temperatures increase evaporation and therefore atmospheric H₂O. AGW believers claim CO₂ acts like a thermostat control knob,

through positive radiative forcing. The problem is, like all greenhouse gases H₂O also reflects the Sun's energy, thereby cooling the planet through '*negative radiative forcing*.' So more clouds could also reduce global temperatures. That's why it is generally colder on a cloudy day. To say the science is [unclear on this subject](#) would be an understatement.

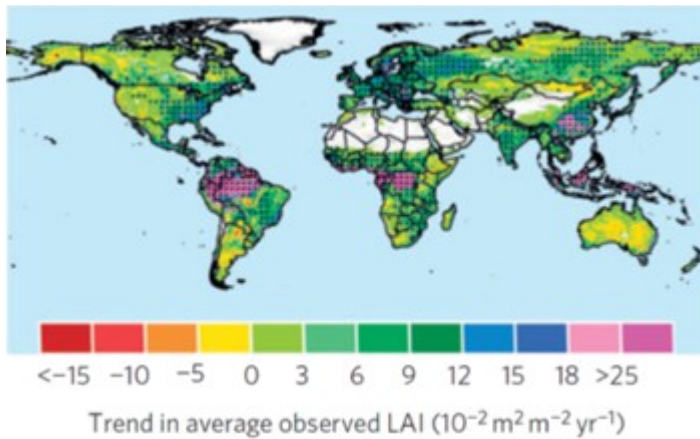

Even if you accept the greenhouse effect as an undisputed fact, these gases are undoubtedly formed through two processes. Naturally occurring and man made emissions. For example, as the oceans warm they expand and emit CO₂ ([Henry's Law](#)) and they absorb it when they cool and contract. If climate is '*controlled*' by the greenhouse effect then a percentage of climate sensitivity will occur through such natural processes and a percentage through mankind's activity. So what percentage of these greenhouse gases are contributed by us?

The amount of water vapour in atmosphere is constantly changing, but estimates fluctuate between 90% – 95% of [greenhouse gases](#). Of the remaining 5% – 10% of greenhouse gases (dependent upon H₂O variability) approximately 60% can be [attributed to CO₂](#). So CO₂ represents between 3% – 6% of the all greenhouse gases. However, the percentage of CO₂ contributed by [mankind's activity](#) is approximately 4% of total atmospheric CO₂.

This means that man's contribution to the greenhouse gases which, according to the AGW hypothesis, is pushing us towards global catastrophe is between approximately 0.12% – 0.24% (depending upon water vapour variability.) If we are generous, that's between 2 to 3 10ths of 1% of all greenhouse gases.

Even if the greenhouse effect is correct, should mankind's total carbon footprint become zero, there would still be at least 99.6% of remaining greenhouse gases to contend with. The AGW hypothesis suggests that less than half of 1% of the entire greenhouse effect is destabilising the whole global climate. It isn't quite that simple, because different gases absorb and emit infrared radiation at different rates. In addition, the CO₂ cycle or '*resonance time*,' the rate at which the planet recycles CO₂, is much slower than the H₂O cycle. Again, there is considerable scientific debate about CO₂ resonance. However, it isn't unreasonable to consider that 75% of AGW is [attributable to H₂O](#) (vapour and clouds) and 20% to CO₂ (with other greenhouse gases making up the difference.)

Therefore, mankind's CO₂ emission count for an estimated 1% of net warming.

Planetary greening

Something never mentioned by the alarmists is the potential benefit of increased atmospheric CO₂. It is plant food after all. Without it there would be no life on Earth as we know it. That's why we commonly turn CO₂ levels up as high as 1500 ppm in greenhouses. It also possibly explains why we are currently witnessing [planetary greening](#), as deserts give way to plant growth. Referring to it as a pollutant seems preposterous. Without it we would all be dead and we breath it out while we aren't.

As with all climate related science the [picture is complex](#). Plants (along with algae and cyanobacteria) use photosynthesis to convert CO₂ and H₂O into the sugars required for energetic growth. Plants do this along slightly different 'pathways' and can be categorised accordingly as types C₃, C₄ and CAM. Their capacity for carbon capture, impact upon the water and CO₂ cycle, prevalence within ecosystems and relative competitive advantages and disadvantages vary. These aspects contribute the overall assessment of their influence on both global biodiversity and climate change. What cannot be said, with any certainty at all, is that the [greening of the planet](#) is 'bad.'

You don't need to be a rocket scientist to ask questions about the AGW hypothesis. Doing so certainly does not make you a 'climate science denier.'

Further reason for doubt springs from the clear discrepancies between the

predicted climate change ‘*computer models,*’ from which all alarmism springs, and the [actual measured data](#). The IPCC, which isn’t a scientific organisation, uses computer models to supposedly inform its [Summary for Policy Makers](#). This is then used by politicians to form the policies that impact upon us all.

Empirical science isn’t so concerned with prediction. It is based more upon observed measurements. Conclusions can then be drawn from analysis of this measured data. This is far more reliable than prediction because it is based upon what actually happened rather than what might, or could happen.

The modeled prediction don’t match observed temperatures

The IPCC formed in 1988 as fears, prompted by NASA scientist James Hansen’s research, rose. The IPCC started predicting what would happen as a result. Consequently we now have more than 30 years of actual, real measured data to compare with the projections.

The Intergovernmental Panel on Climate Change (IPCC) gets its temperature data from government scientists and government bodies. Satellite temperature data sets come from the UAH (University of Alabama in Huntsville) and the Remote Sensing Systems (RSS) analyses of satellite and balloon temperature data. Both UAH and RSS are U.S government funded. Other IPCC data sets come from the

Goddard Institute for Space Studies – GISS (U.S government funded,) and the HadCRUT data sets from the UK government funded Hadley Centre of the UK Met Office and the Climatic Research Unit (CRU) of the University of East Anglia. Oceanic temperature data sets are fed to the IPCC by the Coupled Model Intercomparison Project (CMIP) funded by the United Nations. Data for weather events largely comes from the U.S government funded National Centers for Environmental Information (NCEI) and the UK government funded Met Office. This doesn't necessarily mean the data is untrustworthy but political influence must be considered if you are rational.

The satellite temperatures indicators, which measure radiation levels not temperature (this is calculated from the data,) are considered to be more reliable than average surface temperature measurements, which have a greater susceptibility environmental variance. This indicates the difficulty in even calculating average global temperature as there is [considerable divergence](#) between the data sets.

Hansen predicted additional CO₂ would cause runaway global warming, if nothing was done to reduce emissions. As we all know, since then, CO₂ has steadily increased to 412 parts per million (or 0.04%) of the atmosphere, with man's CO₂ emissions reaching a climate controlling 0.0016%. Yet the measured temperature data does not match either the IPCC's or Hansens predictions. There is reason for scientific doubt about the predictions.

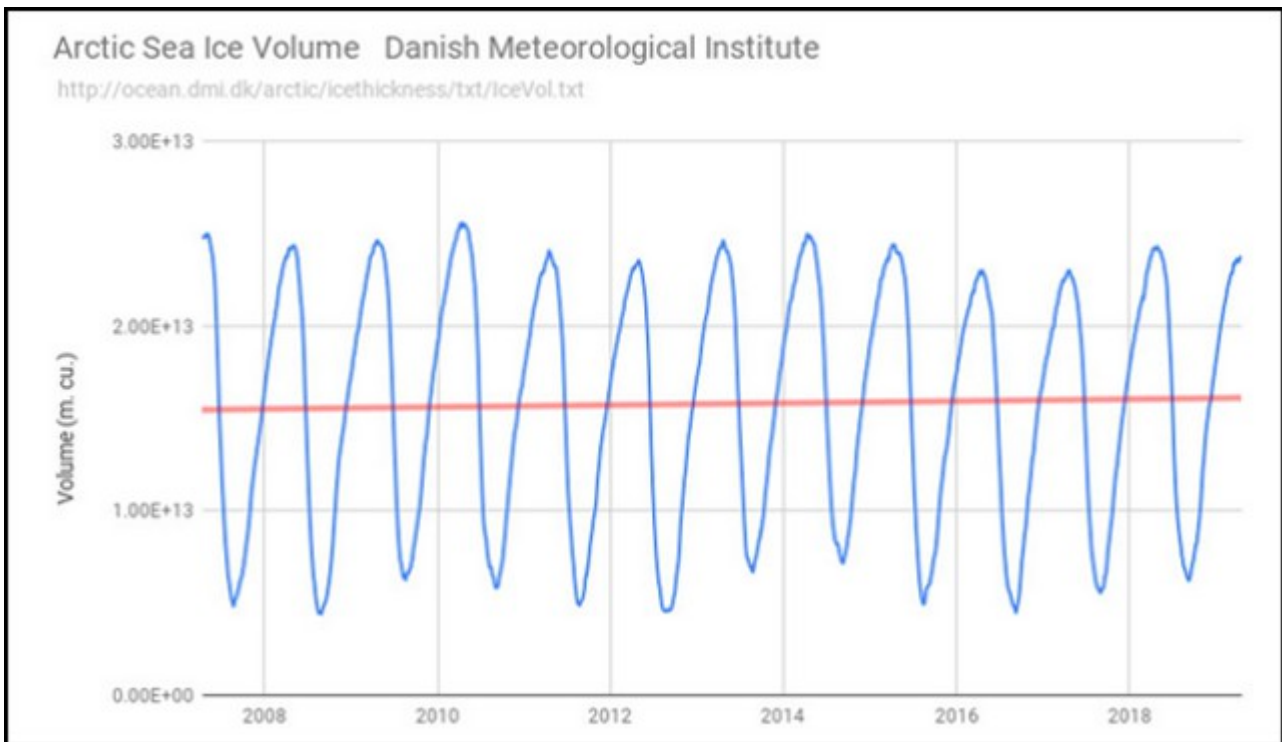

Furthermore, when we look at the prophecies of catastrophe, arising from the AGW hypothesis, in the light of real world data, this again provides reason for scepticism.

Some Reasons To Doubt the Impending AGW Apocalypse

Virtually none of the horrifying prediction made by the IPCC and other AGW proponents have materialised. In 2005 the United Nations Environmental Program (UNEP), founders of the IPCC along with the World Meteorological Organization (WMO), claimed that massive sea level rises would create 50 million

'climate refugees' by 2010. In 2003 the Pentagon released its terrifying document "An Abrupt Climate Change Scenario and Its Implications for United States National Security." In it they claimed, unless action to limit CO2 emissions was taken (and no meaningful action has been taken) the catastrophes we should have seen by now include California being flooded with inland seas, parts of the Netherlands becoming *"unlivable,"* and polar ice completely vanishing in the summer. None of which has come to pass.

In fact ice sheets on Greenland, in the Arctic and the Antarctic have been thickening for decades. The IPCC has warned repeatedly of the dangers threatened by the collapse of the Antarctic Peninsula, now scientist acknowledge these predictions were wrong. All of these provably false predictions were trumpeted by the MSM.

Arctic sea ice volume has increased over the last decade

In 2000 David Viner, the senior research scientist for the Climatic Research Unit (CRU) at the University of East Anglia, told the UK media, who dutifully reported it without hesitation, that snowfall would virtually disappear in the UK. Snowfall records across the northern hemisphere continue to show an increase, not a

decline.

Yet, despite the fact that these kinds of alarmist claims have been proven to be precisely that, we still see people working themselves up into a frenzy as more and more spill forth. The latest has followed the IPCC's most recent [Summary For Policy Makers](#) claiming we have just 12 years to save the planet unless we cut CO2 emissions. This has been picked up by the pressure groups like Extinction Rebellion, who amplify the message, though presumably it's now only 11 years. Hence the Guardian's, and others, insistence we all accept the '*climate emergency*.'

What these erroneous predictions and wildly inaccurate doomsday revelations all have in common is that they never err on the cooler, less dramatic side. This is understandable for the MSM. Saying "*it probably won't make much difference*" sells nowhere near as much copy, or advertising space, as "*the end is nigh*" soothsaying. However, you would have thought the climate science, an extremely complex field, published by bodies like the IPCC or the CRU, would occasionally revise some predictions downwards. Yet they never do, they consistently assert a worsening overheating, melting, burning apocalypse.

Increasing snow coverage

Frankly, for science, this is weird. As new evidence is revealed it constantly adapts and shifts its position. While the direction of travel may generally be consistent, you would expect some variation in the opposite direction from these supposedly scientific bodies. It is not as if there isn't any evidence to at least wonder if the current state of CO2 induced panic is warranted. Yet those

organisation, portrayed as the *'world's leading climate experts'* never cease to ramp up the hysteria.

For example, between 1997 and 2015, while approximately 33% of all alleged man made positive radiative forcing has supposedly occurred, data from the Remote Sensing Systems (RSS) showed no net warming at all. From a scientific standpoint it is untenable to insist the world is doomed, because of CO₂, while at the same time ignoring all the evidence that it isn't. Yet that is precisely what the IPCC and various other government agencies, such as the Pentagon, do.

We are constantly told there is a 'consensus' about the AGW hypothesis. Why? We are not continually reminded of the scientific consensus that the Earth orbits the sun; scientists don't insist we believe waves have frequencies; there's no lobby group of concerned scientists demanding we accept H₂O is water or that electric current conducts. Yet, when it comes to the AGW hypothesis, we are encouraged to accept that the alleged consensus is evidence, which it isn't.

No observable trend during the most intense period of AGW?

This reveals the most unscientific of traits. An agenda.

Evidence of an Agenda

We are told that ‘scientists’ have proven we are entering the [6th mass extinction period](#) as a result of mankind’s’ CO2 emissions. In truth, this claim is [extremely dubious](#). It was the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES) who released their ‘*Summary for Policy Makers*’ which announced the latest prediction that we’re all going to die. Groups like Extinction Rebellion and ‘*thought leaders*’ like Greta Thunberg, presumably spurred on by their terror, then embarked upon global panic campaigns to ram home the message. Aply assisted, as ever, by the [mainstream media](#).

The IPBES produced their terrifying statistics by showing all species loss as a cumulative percentage increase over 19th and 20th century. They took the raw data from the International Union for Conservation of Nature and Natural Resources (IUCN) record of species loss, called the [Red List](#). By carefully reinterpreting this data, apparently to suit an alarmist agenda, the IPBES produced its horrific nonsense.

What the actual data shows is that forced extinction peaked at the end of the 19th century and has been steadily in decline ever since. It is also notable that mankind’s CO2 ‘emissions’ really took off in the post WWII industrial boom. So, if CO2 has any relationship to species extinction (which doesn’t appear to be the case) it is an inverse one. The precise opposite of the scary claims.

[Left] How the IPBES presented the data – [Right] The data

This apparent manipulation of data to unscientifically prove a claim, contrary to the logical interpretation of observation, is something the chair of the IPBES is well aware of. [Sir Robert Watson](#), the former chair of the IPCC, who held leadership positions within NASA, the World Bank, the White House and the UK government, is also Director of Strategic Development for the Tyndall Centre for Climate Change Research (CRU) at the University of East Anglia. The CRU provides much of the HadCRUT data which informs the IPCC's climate change models.

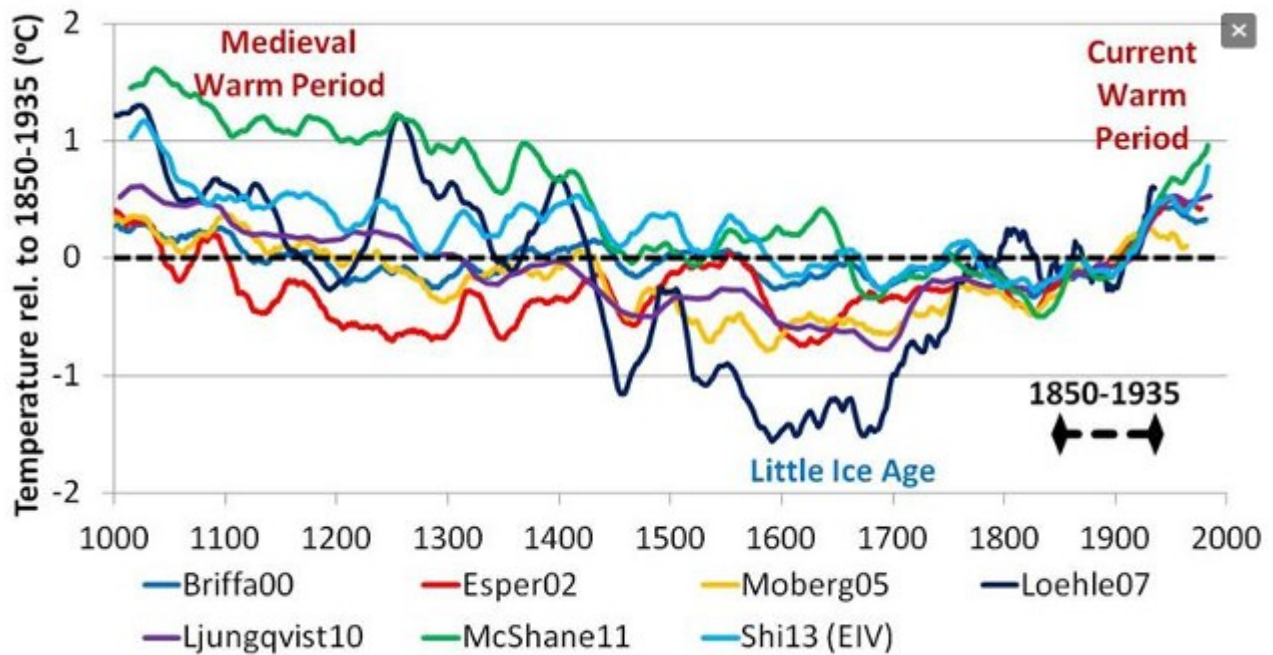

In 2009 the CRU were embroiled in the [Climategate Scandal](#). Leaked emails, probably from a disgruntled insider, showed systematic data manipulation (scientific fraud) at the heart of the CRU. The emails revealed collusion between supposed scientists to hide, alter, misinterpret and otherwise manipulate raw data to *'prove'* their seemingly politically motivated AGW hypothesis. This was absolutely contrary to the scientific method and the global scientific community, though seldom reported by the MSM, were appalled.

The emails showed that wealthy political Non Governmental Organisations (NGO's,) such as the World Wildlife Fund (WWF) were influencing the allegedly hard science of the CRU. Asking them to *'beef up'* certain data and overlook other, less convenient, evidence. That the CRU apparently complied, shows they were not acting as scientists but rather political spin doctors.

The whole basis of the AGW hypothesis alarmism is that the current warming period is unprecedented. This, according to the alarmists, must be because man-made CO₂ is adding an additional 0.4% load to existing greenhouse gases. So any evidence that the warming is not '*unprecedented*' would require a reassessment of the whole AGW concept. Consequently the CRU colluded with other 'leading climate scientists' around the world to hide the inconvenient truth.

While the emails reveal all manner of obfuscation and agenda setting, instead of empirical science, it is the acknowledgments of uncertainty and deliberate sidelining of counter-indicative data which stands out. The CRU scientists recognised that the current warming period may not be '*unprecedented*.' The same can be seen in the so-called medieval warm period, which occurred around 1000 – 1400 CE, before any CO₂ producing industrialisation. Similarly, the data showed a period of extended global cooling in the late 20th century. This didn't '*fit*' with the AGW hypothesis.

Multiproxy studies which suggest Medieval Warm Period was at least as warm as the Current Warm Period.

What happened to the Medieval Warm Period?

Ironically, the actual problem was the uncertainty about the proxy data used (such as tree rings) prior to modern thermometer readings. This uncertainty didn't necessarily *'disprove'* the AGW hypothesis but rather questioned the value of some historical data, thereby making it difficult to *'prove'* unprecedented warming. It was obvious from the communications that there was no consensus about the *'dangers'* of AGW but rather broad agreement that the AGW hypothesis should be promoted, no matter what.

One of the IPCC posters for AGW is the Hockey Stick graph produced by climatologist Michael E. Mann. The CRU emails revealed that this had been produced by altering the way the average *"smooth"* [was displayed](#). He truncated the timeline of some data, to hide the divergence between data sets and give the impression of more rapid, significant, recent warming. He mixed data sources, using the questionable ice core record for historical temperature data (ignoring stomatal record contradictions) then used questionable *'average global temperature data sets'* to separately indicate recent warming. Referenced as *'Mike's Nature Trick'* in the emails, the real shocker was that CRU scientists were impressed with the subterfuge and so adopted it themselves. Producing nothing

even approaching science, but rather propaganda.

That the scientists at the CRU were caught out fiddling the science was bad enough, but that many of the same scientists have continued to provide the HadCRUT data which supposedly informs the IPCC climate models is a firm basis for both lay and scientific scepticism. However, it is far from the only reason to doubt the accuracy of climate alarmism. Other instances of scientific fraud, error and deception in climate research are plentiful. Similarly this has allowed MSM to report abject nonsense as *'evidence'* of mankind's collective suicide mission.

Mike's nature trick

For example, there is no doubt at all that the [warmest decade](#) of the 20th century in the U.S was the 1930's. This presents a problem if you want to demonstrate a recent warming trend, especially if you claim this was caused by the rapid growth of CO2 emissions in the post WWII period. So the temperature data sets provided to the IPCC go through some *'adjustments'* prior to submission. These consistently reduce historical temperature records and [increase more recent data](#). This upwards inflation of modern temperature records, and simultaneous

reduction in historical temperature averages, was highlighted in 2017 by a team of independent Ph.D scientists who reviewed the statistical data sets. They highlighted a reasonable concern that the global average surface temperature (GAST) data is [wholly untrustworthy](#). They concluded:

“ The conclusive findings of this research are that the three GAST data sets are not a valid representation of reality. In fact, the magnitude of their historical data adjustments, that removed their cyclical temperature patterns, are totally inconsistent with published and credible U.S. and other temperature data. Thus, it is impossible to conclude from the three published GAST data sets that recent years have been the warmest ever –despite current claims of record setting warming.”

Alarmism Straying Into the Absurd

Such scientific doubt is rarely reported by the MSM. However, they do report a never ending stream of frankly ridiculous ‘fake news’ stories which always add to the AGW hysteria. A big favourite is the rapidly approaching [extinction of the Polar Bear](#). This reached a crescendo last year when National Geographic released a [real tear jerker](#) of a video showing a starving Polar Bear with the caption ‘*This is What Climate Change Looks Like.*’

A healthy (not starving) Polar Bear

If you forget the fact that the polar bears survived the total disappearance of [summer sea ice](#) in the recent (Holocene) geological past, or that the filmmakers actually said “*this is what starvation looks like;*” even if you ignore the fact that sea ice loss doesn’t really threaten an animal that can swim for [hundreds of miles](#) without stopping, then surely the fact that the Polar Bear populations [is thriving](#) should prompt pause for thought? It did for National Geographic who printed a retraction but probably not for the estimated 2.5 billion people who have seen the video, thanks to the MSM’s avid promotion. It is the imagery and symbolism that will stick in their minds, something all good [propaganda](#) plays upon.

There is even doubt that there has been any ‘*additional warming*’ in the Arctic. Once again we encounter the massaging of historical records and fiddling of measured data to produce a false impression. In keeping with the warming in the U.S in the 1930’s the data shows temperatures rose sharply in the Arctic during the same period. Arctic monitoring stations have measured an annual cooling trend ever since. So it appears [GISS have upwardly adjusted](#) temperature data from 19 of the 23 monitoring station and forgotten to mention the pre-war warming period.

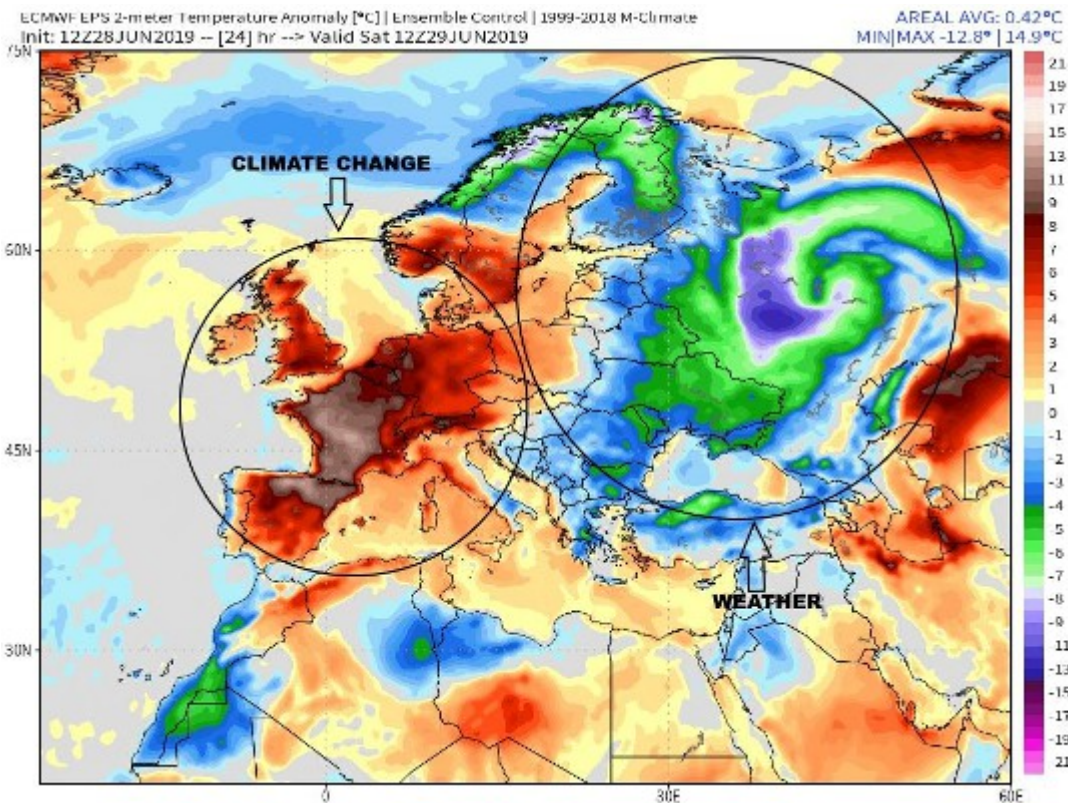

A favoured trick of the MSM is to deliberately confuse weather with climate change. No matter what the weather event the MSM always claim a link to climate change. Often with the assistance of government agencies who seem equally keen to sound the alarm. The BBC have just reported [widespread flooding](#) in Wainfleet in Lincolnshire. They eagerly cited claims from the UK government’s Environment Agency that this is ‘*unprecedented.*’ Except it isn’t. A heavier deluge [fell on the area in 1960](#). Similar dross has sprouted from the reporting of the recent European heatwave. The [BBC reported](#) that France had recorded it’s highest ever temperature of 45.9C. This wasn’t true either. In 1930 temperatures as high as 122F (50C) were [recorded in Paris](#). Again, it is as if the past never happened. Well, a warmer past anyway.

The idea that ‘extreme weather events’ are getting worse is a central tenet of AGW alarm. This is a major consideration for the engineers who build bridges, sewers,

skyscrapers and so on. They keep a close eye on climate trends and predictions in an attempt to future proof their infrastructure projects. In 2016 a team of engineers from [Cambridge University](#) analysed the weather records of the last century. They stated:

“It is widely promulgated and believed that human-caused global warming comes with increases in both the intensity and frequency of extreme weather events. A survey of official weather sites and the scientific literature provides strong evidence that the first half of the 20th century had more extreme weather than the second half, when anthropogenic global warming is claimed to have been mainly responsible for observed climate change.”

They aren't alone. Even the IPCC admit that they only have low confidence that extreme weather events are linked to climate change. So where do MSM stories such as the Guardian's handy visual guide "[Deadly Weather: The Human Cost of 2018's Climate Disaster](#)" come from? This appears to allow the Guardian, among others, to claim that 'extreme cold' is also a sign of global warming. When snow and ice is attributed to '*global heating*' we really are entering the realms of the absurd.

Heatwaves = climate change – Cold weather = weather (sometimes climate change)

If we consider (see [Part 2](#)) that there may be an economic and political agenda at play here, in light of the divergence between climate model predictions and real empirical data, falling temperatures also needs to be squeezed into the narrative. Despite the obvious lunacy, ‘extreme weather,’ as part of the ‘*climate disaster*,’ provides the necessary wriggle room. There is mounting evidence that we are entering a [Grand Solar Minimum](#) prompting significant concerns of rapid cooling, which is always more hazardous for life than warming. Regardless of the fact that the IPCC have claimed the Sun, the source of all energy on Earth, has [little to do with climate change](#), perhaps you won’t be surprised to learn that many scientists disagree.

The MSM also have a habit of reporting climate alarm which, when proven to be utter rubbish, they seldom retract or, if they do, that correction is relegated to the minor pages, months later. Recently [The Independent](#) publicised a report, published in the respected [scientific journal Nature](#), that claimed thermal uptake

in the oceans had been underestimated by 60%. According to the Independent this had massive implications for the climate models. Unfortunately the paper was [mathematically incoherent babble](#) based upon fundamentally flawed calculations.

However, in the world of climate change alarmism, such trifles don't matter. Knowing this paper to be simply '*wrong*' the Independent have, to date, printed no retraction at all. Even 'Nature' have left the paper on their site and, having partially acknowledged the huge calculation error, deceptively state:

"We are working with the authors to establish the quantitative impact of the errors on the published results, at which point in time we will provide a further update."

Eight months later they haven't managed to work this out. Something which should concern anybody who values 'Nature' as a respected reviewer of empirical science.

A world leading climate expert

Another MSM ploy is to highlight celebrity endorsements to convince the public to be terrified. Who needs to understand the science when world leading climate

experts like [Radiohead](#) say they're worried?

This use, or is it abuse, of celebrities reached its pessimum when much loved natural history journalist David Attenborough was convinced to narrate a ridiculous film alleging walruses were falling to their deaths because of climate change. Attenborough stated that climate change had forced the walruses to 'haul out' en masse in "*desperation*" due to sea ice loss, caused by AGW. With the director Sophie Lanfear stating "*This is the sad reality of climate change.*"

This was monumental tripe. Mass 'haul outs' of walruses have long been known as a strong indicator of [population health](#). Far from signs of walrus demise, the increasing size of 'haul outs' indicate an abundance of food and a growing population. Nor does this stunning natural event seemingly have anything to do with receding sea ice. Huge 'haul outs' have been recorded [as far back as the 1930's](#), when the extent of the sea ice was greater.

However, an abundance of walruses also means an abundance of food for the [abundant polar bears](#). While no one really knows why walruses climb cliffs, perhaps they follow scent trails, evading feasting predators also seems a reasonable guess.

These are just a few of the copious examples of scientific fraud and baseless fear mongering which characterise climate change alarmism. Despite the allegations of the MSM and others, those who highlight these problems are neither '*denying climate science*' nor suggesting climate change shouldn't be a concern.

What they are saying is that the counter evidence, frequent incidents of scientific skulduggery, widespread manipulation and misreporting of data and repeated MSM fear mongering, based upon falsehoods, raise legitimate reasons for doubt. There is an apparent agenda unnecessarily heightening public alarm and over emphasising one hypothesis (AGW) at the expense of all the other scientific reasons for environmental caution.

In order to understand why that agenda exists, we need to look more closely at the money behind it, so let's do that. Then we'll consider the ideology underpinning the story of the AGW climate emergency.

Chapter 2

In Part 1 we looked at some of the reasons to question scientific certainty about the Anthropogenic Global Warming (AGW) hypothesis. Please read [Part 1](#) first if you currently believe there is no basis for scepticism. In [Part 3](#) we'll explore the ideology underpinning globalist thinking on the '*climate emergency*.' But first, let's look at some of those globalist forces leading the climate activists and their environmentalist movements.

The Alarmist Power Structure

Over the last few months, we have seen the synchronised appearance of three distinct yet mutually supportive phenomena. The pressure group Extinction Rebellion (XR) seemingly rose from nowhere to global prominence.

Simultaneously, the Swedish teenage activist sensation [Greta Thunberg](#) started a global youth movement, garnering an immense social media following in no time at all, rarely falling far from the MSM limelight since.

The meteoric rise of XR and Thunberg has been accompanied by a ubiquitous MSM and intergovernmental campaign to redefine language itself. Over the last two decades we have been systematically educated to first forget about the '*hole in the Ozone layer*', focus upon '*global warming*' instead, then forget that and

adopt the term '*climate change*' before abandoning that to think in terms of a '*climate emergency*.' This is sometimes called '*reframing*' or, more commonly, '*spin*.' The [underlying evidence base](#) doesn't necessarily change but our perception of the possible threat does.

XR have been calling for global revolution, staging street protests the world over, in response to claimed government indifference to the intergovernmental pronouncements that we are entering the 6th global mass extinction event and only have 12 years left to save the Earth. They insist, as do many others, that anyone who questions their certainty that CO2 propelled disaster is upon us are '*climate science deniers*.'

As the [Red List](#) shows, mankind has wiped out a number of species. But these moronic feats were overwhelmingly achieved with spears, bullets and tarmac. There is no evidence that CO2 ever had anything to do with it, nor that it ever will. XR are one among many modern 'environmentalist' movements who exclude the very real dangers mankind's activities present to the natural world, while focusing exclusively on alleged AGW.

The height of the extinction campaign

Scepticism about AGW does not denote any belief that we don't have a man made biodiversity problem. Certainly deforestation, pollution, urbanisation, modern agriculture, the widespread use of pesticides, electromagnetic pollution, over

fishing, the general loss of natural habitats, the huge ecological destruction wrought by war (by far the biggest threat to the environment) and numerous other environmental abuses are threats. However, the insistence from ‘*green lobbyists*’ that CO2 is practically the only one we should concern ourselves with, consistently overlooks these significant, more evident problems.

To question if CO2 is really to blame, is not to deny either the scientific or historical evidence. To studiously ignore all the other environmental crimes we continue to perpetrate, solely to promote a single unproven hypothesis, most definitely is.

We are reliably informed that XR are a grassroots movement, formed by concerned citizens who are dismayed by the lack of government action on climate. They are supposedly opposed to current government policy and state on [their website](#):

- *Government must tell the truth by declaring a climate and ecological emergency.*
- *Government must act now to halt the biodiversity loss and reduce greenhouse gas emissions to net zero by 2025.*
- *Government must create and be led by the decisions of a Citizens’ Assembly on climate and ecological justice.*

Their demands are clear. The AGW hypothesis is an indisputable fact, the only way to save the planet is by achieving something called ‘*net zero*’ CO2 emissions and elected government policy must be controlled only by people who don’t question either of the first two assumptions.

The Extinction Rebellion Industrial Complex

XR intend to achieve their geopolitical aims by stopping commuters getting to work, gluing themselves to office windows and heavy machinery, ruining local businesses and generally fouling up people’s day to day lives. This allegedly puts them in direct conflict with the state and they have the arrests to prove it.

So it is perhaps surprising that one of the cofounders of XR Dr Gail Bradbrook

recently said:

“The politicians, actually, behind the scenes, including this current government, are telling us that they need a social movement like ours to give them the social permission to do the necessary.”

Gail in a sticky situation

Gail should know. Her links to government policy making and the telecommunications industry are well established. She has spent the last two decades working with charities, NGO's and thinks tanks, influencing, guiding and often producing central government policy.

Over recent years the UK government has passed a slew of legislation systematically eroding people's rights to lawfully gather and peacefully protest. The Public Order Act 1986, Crime and Disorder Act 1998, Anti-social Behaviour Act 2003, Anti-social Behaviour Crime and Policing Act 2014 have coincided with a strategic shift in policing towards practices such as 'kettling,' intrusive surveillance, infiltration and a parallel militarisation agenda.

In order to organise a protest, even in a British provincial town, you need to have it approved by the local authority. Yet XR were seemingly able to bring widespread disruption the heart of London, for days, with little difficulty. The success of their guerrilla protests have been duplicated across major European

cities, with consistent results. They have received massive promotional support from the [mainstream media](#), with their leaders being interviewed on the main evening news and appearing on numerous, high profile, MSM discussion programs.

This is in stark contrast to other groups whose protests have been all but ignored. For example XR's civil disobedience has been dwarfed by that of the [Gilet Jaune](#) in France. Yet, while XR have grabbed the global headlines, including in France, the 'Yellow Jackets' have barely warranted a mention by the MSM, unless to [accuse them of instigating violence](#), and there has been virtually no MSM news reports of the brutal suppression [meted out](#) by the French and EU authorities.

Massive Gilet Jaune demonstration

As far as the state and the MSM are concerned, not all protests are equal. Some are allowed and promoted, while others crushed and ignored. The Notable difference between XR and the Gilet Jaune, other than the size of the protests, is that XR support the globalist agenda while the much larger Gilet Jaune movement oppose it. Obviously, it isn't the weight of expressed public opinion that matters but rather how that opinion is received by the state.

Only a month after the sudden appearance of XR in the UK, the leader of her majesty's opposition, Jeremy Corbyn, had his motion to declare a '*climate emergency*' approved by the UK government. Within weeks of their protest beginning, XR were [in discussion](#) with cabinet ministers. So it seems Dr

Bradbrook's opinion that XR have at least tacit support from the state is well founded.

Claims by XR that they are a '*grassroots*' movement of the people are [complete tosh](#). In just under 3 months, following its launch on October 31st 2018, XR had spread to 50 countries and, by April 2019, was reporting a global network of 400 branches. This doesn't just happen. It requires a massive, coordinated effort, a global, highly effective media strategy and significant funding.

XR have been extremely coy about their revenue sources, claiming it all comes from private benefactors, public donations and money generated from 'activist workshops' where they sell training to would be protestors. Bizarre trainee requirements, such as participants being encouraged to sign a declaration stating a willingness to break the law for their activist principles, have raised considerable concerns among the [genuine activist movement](#). However, you only need to look at the leadership to identify some extremely powerful globalist institutions deeply ensconced within Extinction Rebellion.

[Senior figures](#), like Dr Gail Bradbrook, a consultant for EE and the Cabinet Office, among others, maintain a network of connections to multinational corporations, governmental and intergovernmental bodies. Dr Bradbrook works for a registered charity called [Citizens Online](#), who call themselves 'digital inclusion experts.' Whatever that means?

Tazza loves 5G

They have consulted for a variety of government ministries and agencies including Ofcom and the Department for International Trade. Their board of trustees include [Lord St John of Bletso](#), whose corporate ties include stints with numerous oil and gas energy firms, plastic manufacturers, investment and asset management firms and banks. Anthony has more recently focused upon communication technology and sits on a number of governmental policy steering groups focused upon [the 4th industrial revolution](#). While gracing the [House of Lords Select Committee on Artificial Intelligence](#) Anthony co-authored the following:

“We urge the Government to consider further substantial public investment to ensure that everywhere in the UK is included within the rollout of 5G and ultrafast broadband, as this should be seen as a necessity.”

I’m sure the fact that Tony’s venture capitalist firm [Albion Ventures VCT](#) stand to gain significantly from the 5G toll out had nothing to do with his enthusiasm for it. Nor his directorship of [Tyvak Orbital Networks](#), who make the micro satellite technology needed to roll out 5G to every single corner of the nation.

Tazza isn’t the only member of the Citizens Online charity board with a vested interest in 5G. Charles Lowe is involved with [Telehealth Solutions Ltd](#), who are heavily invested in ‘remote health monitoring’ and Tuli Faas, a corporate lawyer, with links to SITA, the world’s largest provider of communication and IT services for the airline industry, would also like to see the spread of 5G technology.

While working for Citizens Online, funded by the telecommunications industry, Dr Bradbrook entered into the [heart of government](#) policy making. Speaking to the influential think tank the [Institute of Public Policy Research](#) (IPPR), who are largely funded by the JP Morgan Chase Foundation (the U.N’s bank of choice,)

when asked in 2004 who was paying for all this ‘*deep state*’ infiltration Dr Bradbrook said:

“Who has paid for it? Industry, our Alliance for Digital Inclusion partners have understood the importance of the strategic coordinating role, alongside the delivery of projects on the ground. AOL, BT, Cisco, IBM, Intel, Microsoft and T-mobile are all supporting this work.”

So with leading lights in the ‘*environmentalist movement*’ having such deep ties with multinational corporations, perhaps it isn’t so surprising that XR are strong advocates of 5G. On their website they state:

“There is certainly no conspiracy at the heart of XR to promote 5G and/or other technical solutions and such conspiracy theories are best seen in the light of usual attempts to divide movements and attack spokespeople, like the attacks on Greta Thunberg.”

Whenever we see the ‘*conspiracy theory*’ canard deployed it is usually a good indicator that the corporation involved, in this case Compassionate Revolution Ltd (Extinction Rebellions’ tax exempt parent company) has something to hide. Given that XR’s whole existence is based upon the allegation of a conspiracy between the state and the ‘*big polluters,*’ to suppress the seriousness of the ‘*climate emergency,*’ it seems odd they would use the term dismissively themselves. However, in the case of their promotion of 5G, this attempted deflection is understandable.

PUBLIC HEALTH WARNING

ALL WIRELESS DEVICES EMIT MICROWAVE RADIATION—a known biological hazard

EVERY TIME YOU USE A WIRELESS DEVICE, YOU ARE EXPOSED TO MICROWAVE RADIATION.

The World Health Organization (WHO) labels this radiation a Class 2B possible cancer-causing agent in the same category as lead, DDT, and chloroform. Cell phones, cordless phones, tablets, laptops, 'smart' meters—the more you are around these devices, the more radiation you get.

MICROWAVE RADIATION IS HARMFUL TO YOU. Scientists link this radiation to diseases, both long-term and short-term: cancer, infertility, DNA damage, damage to fetuses, sleep problems, memory and behavior problems, heart problems and many others.

MANY PEOPLE HAVE BECOME "ELECTRO-HYPER-SENSITIVE" (EHS) and cannot tolerate even low exposures, seriously impacting their health, job, housing, and social lives.

GOVERNMENT REGULATIONS DO NOT PROTECT YOU. FCC guidelines were written decades ago and ignore current science linking microwaves to human disease. Cities like San Francisco have tried to introduce mandatory health warnings on cell phones but the wireless industry has suppressed these efforts with lawsuits and economic boycotts.

A team of more than [240 international scientists](#) have expressed significant concerns about the health and environmental impacts of non-ionising electromagnetic fields (EMF) and [implored the EU](#) and other globalist institutions, to hold a moratorium on 5G safety.

This can only be done by independent scientists as the corporations themselves, who pay for Gail's policy advice, evidently have no interest whatsoever in exploring these issues. At the U.S Senate Commerce Hearing in February 2018, the representatives of the telecommunication industry stated that they had funded [no independent research at all](#) into 5G safety nor its environmental impact. Knowing this, without seemingly having a clue what damage this military grade weapons technology may inflict upon people or the environment, governments across the planet are frantically surging towards global deployment of this potentially lethal technology.

Promotion of 5G is a core element of XR's entire ethos. They are wholly supportive of the IPCC stance and state they were formed as a response to the IPCC's Summary for Policy Makers. They want to see, at the very least, full implementation of the [Paris Climate Agreements](#) and are committed to the U.N's [sustainable development goals](#) (SDG's.) All of which is predicated upon the global adoption of 5G technology.

The Paris Climate Agreement lays the groundwork for a global economic change towards what the U.N call a [decarbonized economy](#). According to one of the chief

architects of that agreement, [Christiana Figueres](#), it represents the first time such a global economic rebirth has been attempted. Speaking in 2015, in her then capacity as the Executive Chair of the [U.N Framework Convention on Climate Change](#) (UNFCCC) she stated:

“This is probably the most difficult task we have ever given ourselves, which is to intentionally transform the economic development model, for the first time in human history.....the first time in the history of mankind that we are setting ourselves the task of intentionally, within a defined period of time to change the economic development model that has been reigning for at least 150 years, since the industrial revolution. That will not happen overnight and it will not happen at a single conference on climate change.....It is a process, because of the depth of the transformation.”

Figueres intentionally transforming the global economy

In order to achieve this economic revolution, speaking in November 2017, to the U.N Environmental Program (UNEP) the U.N Secretary-General Antonio Guterres said:

“Energy is the golden thread that connects all the Sustainable Development Goals (SDG’s). That means transforming the world’s energy systems.....With smart grids it is now feasible to generate, transmit and distribute power efficiently, cutting transmission losses and providing clean, affordable, economically viable and environmentally sound energy services.”

This theme was supported by Liu Zhenmin, the UN Under-Secretary-General for Economic and Social Affairs, who stated:

“New technologies, new business models, and new approaches to capacity building are all needed to transform the world and achieve global sustainable development. The global energy interconnection, through smart grids, offers one such avenue.”

The planned smart grids, smart cars, smart cities, smart fridges and pretty much everything prefixed with ‘*smart*’ is reliant upon the vaunted [Internet of Things](#) (IoT). This is fully endorsed by globalist and corporate institutions like the World Economic Forum who claim the IoT is essential for achieving global ‘*sustainable development goals*’. All enabled by 5G. This is why the states around the world are [actively promoting it](#).

For XR to deny they support 5G is completely at odds with their own existence. Support for 5G is integral to everything they do and say. The global revolution they are advocating is already well underway. It is the transformation of the global economy towards one based upon units of energy rather than the petrodollar.

Most rank and file XR activists, who must be among the most ardent of AGW hypothesis disciples, probably have the best of intentions and really do want to ‘*save the planet*’. However, you don’t have to look very far into the top tier of XR activism to find economic, rather than environmental, ‘*activists*.’

Extinction Rebellion's Economic Activist

[Farhana Yamin](#) is an XR activist who glues herself to buildings (though only for a 20 minute photo shoot.) She was allegedly protesting against the big polluter (Royal Dutch) Shell. Yamin claims that these “*business-as-usual*” polluters are denying climate science in the same way that the tobacco industry denied medical science.

Christiana & Farhana

Shell are a funding partner of the IPPR think tank whose conferences Farhana Yamin, like her colleague and fellow adhesive activist Gail Bradbrook, [attends](#). The Shell Foundation are also partners of the World Resource Institute whose board members include [Christiana Figueres](#) who Yamin worked with to formulate the Paris Climate Agreement. So it seems odd she would protest against Shell when they are financial supporters of her causes.

As activists go, Farhana is [exceptionally powerful](#). Having played a part in drawing up the Paris Climate Agreement with Christiana, as a Greenpeace board trustee (Greenpeace being the wealthiest environmental pressure group on Earth,) and an advisor to the World Wildlife Fund and World Economic Forum, she is also a lead author for the Intergovernmental Panel on Climate Change. Yes,

she is a lawyer not a scientist, but you don't need to be a scientist to become one of the 'world's leading climate experts' as far as the IPCC are concerned.

Yet it is perhaps her status as a fellow of the deepest of deep state think tanks the [Royal Institute of International Affairs](#) (Chatham House,) who spawned a global network of influential policy think tanks such as the Council on Foreign Relations (CFR) and the European Council on Foreign Relations (ECFR), which means no one could be better placed to shape global economic policy than Farhana.

However, we might question her scientific understanding. Farhana was an advisor to the government of the Republic of the Marshall Islands (RMI) who feared they would disappear because of climate change. Her advocacy for the terrified Islanders helped her establish the concept of 'net zero' carbon emissions with the UNFCCC. One wonders where the RMI government's fears came from, because the science seems to show the [Marshall Islands are expanding](#), not disappearing. Though there is no mention of this in the XR literature, nor any comment from Farhana.

The round table of globalist think tanks

Rapidly achieving '*net zero*' carbon emissions, as defined by the United Nations Kyoto Protocol, are one of XR's key demands, fiercely advocated by Bradbrook, Yamin and other activists. This won't mean an actual reduction in levels of CO2 emissions. If it did then the '*big polluters*' business model really would be in trouble. Luckily for them it doesn't, which is why it will still be business as usual but only for them. Developing nations, small to medium size enterprises and start-up businesses will be screwed by '*net zero*' carbon emission policy. Which is why the '*big polluters*', like Shell, are all for it. There's nothing as lucrative as a monopoly.

The Kyoto Protocols, a treaty Farhana helped to draw up, also established the concept of [carbon offsetting](#) in international law. Not only does this allow multinational corporations to continue their industrial productivity, but it creates a whole new CAPS (Cap and Trade) [emissions market](#) as an additional revenue stream for '*big polluters*' and their major beneficial shareholders, the [banksters](#).

In turn, this created the [carbon credit](#). A tradable certificate which can be used to 'purchase' a tonne of carbon pollution. These credits are as good as money and can be bought and sold (traded for profit) on the open market. Currently the largest '*market place*' is the EU's Emission Trading Scheme.

Supported by the [World Bank and the International Monetary Fund](#) (IMF) our taxation and corporate profits (rarely taxed in any meaningful way) can be used to purchase the carbon credits, allocated to developing nations, to offset carbon emissions in the developed, industrial world. These Emission Reductions Purchase Agreements (ERPAs) mean the developing nations will no longer own the necessary '*carbon credits*' to enable them to operate an effective industrialisation policy. Richer nations, and their corporations, can carry on emitting CO2 as long as poorer nations don't. Thereby staying poor.

For multinational corporations, not only does this reduce the chances of global competitors emerging, they can use other '*carbon offsetting*' mechanisms to further consolidate their position and profits, as well as maintaining opportunities for the continuing neo-colonial exploitation of impoverished labour in developing nations.

[Left] Farhana speaking as CEO of Track0 and representing the globalist think tank Chatham House at the 2016 U.N Bonn Climate Change Conference. [Right] Farhana being photographed by the MSM as she is arrested by a police constable, because she's a climate activist rebel (honest!)

The [Clean Development Mechanism](#) (CDM) something else XR are campaigning for, allows multinational corporations to 'spend' their carbon credits by investing in 'emission reduction projects' in developing nations or countries whose economies are 'in transition.' This provides further profit opportunities for the 'big polluters' as they deploy their corporations to seize poorer nations' resources and reap the rewards from the [infrastructure projects](#) they force upon the target country. All moving seamlessly in unison with the U.N's plan to develop the new global economic model.

It is undoubtedly Farhana's experience as an international lawyer and global policy advisor which prompted XR to 'allow' her to take the lead in discussion with the [UK government](#) only weeks after the 'grassroots' activist movement came into being. As an advisor to the [UNFCCC](#), who plan to intentionally transform the global economic model, perhaps Farhana wasn't surprised when the discussion turned to overhauling the 'debt based economy.'

According to XR activist and co-founder Clare Farrell, this is precisely [what the discussion entailed](#).

"I was surprised to hear a radical reflection on our economic paradigm from Michael Gove when he talked about how our model is extractive and destructive – and that we need to move to a circular model. And that similarly a debt based

economy doesn't do right by young people, that it is creating a huge debt for them and that it has to change."

‘Grassroots’ XR activists welcomed by UK Government Cabinet Ministers weeks after forming their global movement of the people.

Perhaps Clare is more concerned about flooded Islands and was somewhat perplexed, but I’m sure the words of the UK cabinet minister and Secretary of State for Environment, Food and Rural Affairs weren’t lost on Farhana. A woman of many talents, she is also the founder and CEO of **Track0** who aim to assist governments, businesses, investors and philanthropists to transition towards a decarbonised global economy. [Her company partners](#) with the Rockefeller Foundation, among other globalist heavyweights.

The Rockefeller empire, built upon oil, venture capitalism and banking, recently announced it was divesting from fossil fuel and increasing its holdings in [clean energy technology](#). They, along with many of the wealthiest tax exempt foundations in the world, are major backers of the [United Nation’s sustainable development goals](#) (SDG’s) inspired by the [Agenda 2030](#) commitments.

You may wonder what’s wrong with that. Surely it is good news that the wealthiest people on Earth have realised the error of their ways and, having been the primary cause of the CO2 emissions allegedly driving us towards extinction, they have all turned over a new leaf, having suddenly discovering their concern for humanity and the planet. However, the Agenda 2030 goals raise some doubt.

It appears that the transition towards a new global economic model, as promoted by the UNFCCC, may deliver utopia, but only for the Rockefellers and their ilk.

Agenda 2030, though couched in fluffy language, serves up a plethora of wonderful and totally meaningless objectives such as “ending all poverty.” However, even rudimentary analysis of the objectives prompt concern.

Agenda 2030: Hooray! We’re saved. The U.N and multinational corporations are going to rescue us from ourselves

It firmly establishes the remit of a global government to seize all resources. Water, food, energy and even the air will be regulated by the global government. Nature will be ‘protected’ by the global government by restricting human access to the countryside through ‘sustainable use of terrestrial ecosystems.’ GMO will be encouraged, to ensure food security and resilience, by the global government. Public health, such as [mandatory vaccination](#), will be regulated and enforced by the global government. The world’s children will be ‘educated’ by the global government.

The global government, in order to achieve global SDG’s, will have to regulate all

industry, economic activity, manufacturing, scientific research, healthcare, international trade, travel and more. People will need to live in smart cities (because most of the countryside will be off limits) where their energy usage will be monitored, and restricted where necessary, through global government's control of the 5G Internet of Things. All money will be controlled by the global government as people are transitioned away from private property towards allocated sustainable resource usage.

Maybe it's the centralised control of everything and everyone on Earth which interests the global economic elite? Rather than a love for humanity and the environment driving their incessant push towards global '*sustainable*' government, including the financialization of nature itself, perhaps the creation of new markets based upon SDG's are an impetus?

Has this never occurred to Gail Bradbrook, Farhana Yamin and the other activist leaders of XR? It's feasible I suppose. Only you can decide if you think it's likely.

The Cultural Abuse of Greta Thunberg

Greta Thunberg: Addressing the World Economic Forum (like green activists do)
The same questions could be asked of the other environmentalist sensation Greta Thunberg. Greta has certainly been sharing the rarefied atmosphere of the global elite. We are supposed to believe this all came about by chance following her 1

girl protest outside the Rikstag (Swedish Parliament) in August 2018.

In the eight months since, Greta has inspired global protests, addressed the U.N, EU and World Economic Forum, has been supported by politicians across the planet, spoken to huge crowds in London, Berlin, Sweden and elsewhere and has gained millions of Social Media followers across the globe. Not bad for 16 year old, and all achieved in a matter of months.

Again we are told Greta has simply [captured the public imagination](#). By being in the right place at the right time, she has struck a chord with a population desperate to see action on climate change. Just like XR, the movement she inspires is organic. A ‘grassroots’ uprising of concerned citizens, mainly children. Anyone who questions her are not only ‘*climate science deniers*’ but also fascist bigots, for she is both autistic and young.

This is undoubtedly one of the most absurd narratives ever foisted upon humanity. If you imagine for one moment that it is possible for a child activist to achieve all this in a few months without powerful backers, significant investment and a coordinated media strategy, you really have taken leave of your senses. Could it be that the same multinational corporations, global investors and state apparatus’, so conspicuously involved with Extinction Rebellion, are also behind Greta?

Greta’s initial emergence was first promoted by the founder of the Swedish financial industry consultancy firm Laika, Ingmar Rentzhog. Rentzhog is one of Al Gore’s Climate Reality Project (CRP) [Organisation Leaders](#) and Greta is a youth advisor to the CRP’s partner organisation [We Don’t Have The Time](#) (WDHTT), run by Rentzhog.

WDHTT is a marketing platform with specific interest in digital media and promotes ‘*carbon offsetting*.’ They are keen to establish the WDHTT rating system for brands and products. People will be encouraged to vote down products that aren’t ‘energy efficient’ and boost sales for those that are. Products will be valued based upon their carbon footprint. Marching along with the U.N’s determination “*to change the economic development model*.”

Ingmar Rentzhog explaining why we need a new global economy.

I believe Greta, like the majority of the XR rank and file activists, is genuine in her concern for the planet. Like most people under 30, despite the numerous [reasons for reservation](#), Greta has literally been ‘educated’ to unquestioningly accept the AGW hypothesis. When the IPCC say we only have 12 years left to save the planet, oblivious to the [manipulated data](#) used to make this claim, Greta is not alone in being terrified.

It is this fear which is exploited to convince people to accept a radical overhaul of the global economy. One that will consolidate, protect and enhance the power of a tiny, global elite who would be better termed the *parasite class*.

We can be reasonably certain that Greta is being abused in this way by the [censorship of her speeches](#). When Greta addressed the U.N Conference of Parties (COP24) in December 2018, the NGO Avaaz, who heavily back her media strategy, released transcripts to her eager Social Media audience. However they removed certain elements of her speech, as follows:

“.....You only talk about moving forward with the same bad ideas that got us into this mess, even when the only sensible thing to do is pull the emergency brake..... Our civilisation is being sacrificed for the opportunity of a very small number of people to continue making enormous amounts of money.”

This is because, like XR, the NGO Avaaz are a creation of that *'very small number of people.'* Avaaz was founded in 2007 by Jeremy Heimans and David Madden who also run a New York based consultancy firm called [Purpose.inc](#). They set up Avaaz with the assistance of [Moveon.org](#), a fundraising organisation for the [Democrat Party](#) in the U.S which is financially backed by the billionaire, currency speculator, George Soros. Avaaz's startup was also directly funded by Soros, as evidenced by p88 of his Open Society Foundation's [2009 tax returns](#).

Just like XR, within months of their creation, Avaaz Foundation representatives found themselves in discussion with high representatives of international government. The NGO attending the U.N COP13 conference in Bali. They embarked, along with fellow [Rockefeller backed](#) NGO 350.org, in the creation of the Global Call For Climate Action (GCCA – also partners of Yamin's **Track0**) and threw their weight behind the GCCA's [TckTckTck campaign](#). The partners in the TckTckTck movement read like a who's who of multinational [corporations and NGO's](#). Google (Alphabet.inc), Microsoft, EDF energy, HSBC, Lloyds Bank, Volvo, Peugeot, Centrica and of course Avaaz, were among its numerous contributors.

The notion that Greta is promoted by an NGO complex, partnered and funded by multinational corporations, has been flatly denied by Rentzhog and other member of the WDHTT team. The narrative we have been given is that when Greta found out that her name had been used by WDHTT without her permission, she immediately withdrew her support. For their part, WDHTT stated that they were only interested in climate change, not economics.

Greta leaving, seconds after delivering her world changing speech to the ...er...
gathered delegates

We know this is tripe thanks to the outstanding investigative journalism of [Cory Morningstar](#), who has painstakingly pieced together the timeline of Greta's explosive arrival on social media and the continuing support, of what Cory calls, the Non Profit Industrial Complex (NPIC). Their focus clearly isn't on climate but rather economic change.

For example, Greta really stepped into the limelight with her Speech to the U.N COP24 conference in Poland. Her presentation was immediately promoted by the World Bank through their 'partnership' program the NGO [Connect4Climate](#). This video consequently went viral, highly likely if the World Bank are pushing it, and was then reported by the MSM as Thunberg wowing the dignitaries from gathered nations, all of whom understood the vital importance of her message. In reality, she was speaking to an [empty auditorium](#). Obviously the U.N delegates weren't that interested in her climate change message and nor were the MSM in reporting honestly.

This is because globalist institutions like the World Bank, who exist to [create third world debt](#), aren't really in the business of 'saving the planet.' Their NGO front, Connect4Climate, has two purposes. Firstly to 'greenwash' the World Banks' predatory crony capitalism and secondly to sell the propaganda the World Bank require to achieve its objective. Transition to a new global economic model. Similarly, you don't have to look far into the WDHTT business partners before finding links to some of the world's largest multinational corporations, policy makers and think tank 'leaders'. In September 2018 Rentzhog [co-authored an op-ed](#) with the president of the 'Club of Rome' Anders Wijkman. For reasons we'll discuss in [Part 3](#), Greta's PR Team's association of the 'Club of Rome' is notable. Greta's mum, Swedish opera singer Malena Ernman was also a signatory to the open letter. In it, they all agreed:

".....the work of saving the planet must start with a bottom-up approach..... Although much of the change required is both possible and profitable, vigorous political campaigns are essential to adjust prices, taxes and regulations so that the transition to a sustainable society becomes attractive, profitable and fast.....The necessary proactive policies must be based on broad social mobilisation; something

reminiscent of what takes place in communities threatened by war.....The next government's primary task is to create the momentum for the necessary transformation. The signatories stand ready to assist in the process, in support of transforming our society and the wider world into a low-carbon economy."

Club of Rome: It's a climate emergency and they have a plan

Both Rentzhog and WDHTT cofounder, Christian Emmertz are Al Gore Climate Reality Project leaders. Emmertz is also a partner at the corporate finance firm [Realcap](#).

Al Gore has been described as the world first 'Carbon Billionaire' though he strenuously denies this. However, there is no doubt that he has been among the most prominent public faces pioneering the path towards sustainable investment in a carbon neutral world. But why are immensely wealthy people like Gore, Soros and the Rockefellers so keen on this transition to a new global economic model?

In an interview to the [Financial Times](#) in 2014 Gore said:

"The next five to 10 years is the most critical time to accelerate the transition to a low-carbon economy. We think capitalism is in danger of falling apart.....We need to go all in. We are going to be more aggressive because we have to."

When Gore says capitalism, he doesn't mean the free market. He means the

system of [global collectivism](#) which controls markets for the benefit of multinational corporations and the parasite class who own them. In fact, nothing could be further from a free market. The free market only exists for small to medium size enterprises. If their business model fails, they go bankrupt. This system is not shared by globalist corporations. When their business collapses, as it did in 2007/8, they are deemed '*to big to fail*' and taxation is used to bail them out.

The crisis of capitalism (the crony collectivist variety) is something [spoken about frequently](#). We are told it is plagued by cycles of boom and bust and impacted by wild market swings, brought on by allegedly unforeseeable financial catastrophes. None of the thousands of MSM column inches dedicated to these issue have ever addressed them with a shred of integrity.

The truth is that Fiat currency (money) is not sustainable in its current form because it is based upon the usury that is [fractional reserve banking](#). It can only ever create mounting global debt because Fiat currency itself is issued through a debt mechanism. While the parasite class has used the apparent criminal fraud of fractional reserve and central banking to Hoover up global debt into their own coffers, which they call credit assets, at some point the bubble has to burst. That point is rapidly approaching.

In addition the [petrodollar](#) is falling out of favour, especially in India, China, Russia and Iran. The global parasite class are faced with the dual problem of potential seismic power shifts and structural upheaval. There's not much point being unimaginably cash rich if money itself is worthless.

This is the crisis that preoccupies them, it has nothing to do with climate change. The 'emergency' is economic not ecological. However saying, "we need you to bail out our business model again" is a tough sell. Having bailed out their financial system only a decade ago, and suffering the destruction of austerity policies as a result, people aren't likely to put up with it again. So, in part, the reason the parasite class are promoting the 'climate emergency' is to convince all of us not only to accept but actually demand a new global economic model. One designed to maintain and enhance the parasites, rather than the host.

This is why XR were created, it explains the use of unsuspecting, well-meaning activists like Greta Thunberg and it defines the IPCC and MSM's insistence that we all believe in the doomsday scenario being sold to us as the 'climate emergency.' The whole purpose is to instill fear in the public imagination. It is the oldest of [propaganda tricks](#).

A fearful population will clamour for the government do something to 'save them.' They will accept increased taxation, reduced economic freedoms and forced relocation; they will give up private property rights, welcome dictatorial 'healthcare provision,' willingly submit to restriction on their freedom of movement and most importantly, will compliantly hand control of all resources to their benevolent global state.

In order to achieve the total acquiescence the people really need to believe it in their hearts. The propaganda must be overwhelming and impervious to all who could possibly question it. These people must therefore be demonised as '*deniers*,' the modern day heretics. They must be cast out as unbelievers, while humanity demonstrates its obeisance to the new global faith. The climate emergency.

However, like most organised religions, there is something unseen lurking within its power structure. A hidden ideology drives the parasite class and it needs to be understood if rational people are going to have any chance of resisting the global devastation it ushers in.

Chapter 3

We've looked at some of the reasons to doubt the theory of Anthropogenic Global Warming (AGW.) We've also discussed the financiers of a global network of Non-Governmental Organisations (NGO's) who have created the prominent environmentalist group Extinction rebellion and propelled Greta Thunberg to the world's stage. We also looked at the reasons why the so called global elite, herein referred to as the '*parasite class*,' want to create fear to bring about global economic change.

Maurice Strong

Terribly frightened and desperate to be saved

If environmental activists' concerns come from any single source it's the Intergovernmental Panel on Climate Change (IPCC.) It is not a scientific organisation. It was formed by governments with the full backing and support of multinational corporations and the parasite class. All the data it uses to make its alarming predictions come from [government funded](#) bodies.

Its remit was designed with one purpose in mind. To provide the scientific justification to convince the planet's population to accept [fundamental economic change](#) and to usher in a global governance to manage all of the Earth's resources. Its methodology was carefully constructed to deliver behavior changing propaganda. Objective science has little to do with it.

The IPCC were formed thanks largely to the efforts of [Maurice Strong](#). Strong was an oil tycoon and senior executive for various multinationals including stints as the Vice President of Power Corporation of Canada, CEO of Petro Canada, head of Ontario Hydro, chairman of the Canada Development Investment Corporation and many more. These were just a few of his numerous executive positions across a dizzying array of global corporations.

Equally copious were his political roles. At various times he was Senior Advisor to UN Secretary General, Senior Advisor to World Bank, Chairman of the Earth

Council, Chairman of the World Resources Institute, Co-Chairman of the Council of the World Economic Forum, Commissioner for the World Commission on Environment and Development, President of the Council of the University for Peace, Under-Secretary-General of the United Nations and many more.

Maurice Strong

Maurice Strong was one of the founders, and the first Executive Director, of the United Nations Environmental Program (UNEP) in 1972. This created an entirely new branch of United Nations global governance. He gave up this role in 1975 and moved from his leading environmentalist position back into the oil industry to become head of the Canadian state oil enterprise Petro Canada.

Strong never had any problems moving back and forth between the world of the *'big polluters'* and environmentalism. Seemingly, without a flicker of irony or any uncomfortable questions being asked. To be fair, the majority of the public didn't know who he was, so he was able to operate without too much public scrutiny.

Despite being honoured as the 'world's leading environmentalist' his career ended ignominiously when he was caught syphoning \$1M into his private account in the midst of the [U.N oil for food scandal](#). Though Strong denied any involvement, contrary to the evidence, he fled to China anyway. It seems his humanist

compassion didn't extend to starving children in war torn Iraq.

Of course one human being can't really bring due diligence to bear upon such a bewildering number of global leadership roles. Mastering one would present a challenge, even to the most gifted of bureaucrats. Fortunately for Maurice, he wasn't really required to know what he was doing. He was simply required to do as he was told.

The cheque that wasn't. Maurice little gift to himself (apparently)

This isn't to say he wasn't talented. His was a gifted diplomat and networker. Backed by the financial might of the Rockefellers, Strong was able to build an extensive international framework connecting influential political, financial, industrial, scientific and academic figures. This made him perfect for his role of building the consensus for a new economic model. Strong's was tasked to commission the right people, enact the right policy, sign the right declarations, convene the right conferences and set the right terms of reference. 'Right' being defined by the chain of multinational venture capitalists who made sure Maurice was in the right job at the right time.

Strong's aunt was Anna Louise Strong, an ardent communist and associate of Lenin, Trotsky and Mao Zedong and Zhou Enlai. In 1947, having dropped out of school in 1943 with no qualifications, 18 years old Maurice was living with the Treasurer of the United Nations Noah Monod. Monod introduced him to David Rockefeller and from that point onward Strong was a Rockefeller man. At the time, the Rockefeller's were still very much 'big polluters.' Their global Standard Oil empire, that would spawn Exxon-Mobil, Chevron and others, was dominant in

the [Seven Sisters](#) oil cartel which, by 1973, controlled 85% of global oil trade.

As a [trustee of the Rockefeller Foundation](#), in 1972 Strong commissioned the **Only One Earth** report which created the concept of '*sustainable development*' as a stepping stone to the centralised, global control of all resources. He convened the 1972 Stockholm summit which established UNEP with himself as its leader. The start of the movement towards seizing control of the Earth's natural resources coincided with the first publication from the globalist policy think tank [the Club of Rome](#) entitled '[The Limits To Growth](#).' This argued that continual economic growth could not be sustained in conjunction with population growth. The problem was that there were just too many of us. Something needed to be done.

The Club of Rome

The Club of Rome first convened at David Rockefeller's private estate in Bellagio, Italy in 1968. According to their [official history](#) they were invited by the Swiss government to stage their first formal meeting in Berne in 1970. '*The Limits To Growth*' sprang from that meeting. Prominent members have included David Rockefeller, Henry Kissinger, Bill Gates, Al Gore and Maurice Strong.

Henry Kissinger

In 1974 Henry Kissinger commissioned and contributed to a report by the U.S National Security Council called [the National Security Study Memorandum or NSSM-200](#), often referred to as the Kissinger Report. They argued that maintaining access to the mineral wealth in least developed countries (LDC's) was essential for continued U.S economic expansion. The population growth in these poor nations was therefore a problem which needed to be managed.

Seeking to distance themselves from the dirty work, Kissinger recommended that the U.N should be the instigator of population control policies. This resulted in [all manner of atrocities](#). It led to the horror of China's 'one child' policy, the forced sterilisation of Peruvian women, an increase in the Ugandan AIDS epidemic and effectively female euthanasia in India, among other humanitarian disasters.

In 1987 the Brundtland Report ([Our Common Future](#)) was released by the U.N. [Gro Harland Brundlandt](#) was by then the Prime Minister of Norway, but had previously been appointed chair of the World Commission on Environment and Development (WCED) by the Secretary-General of the United Nations, Javier Pérez de Cuéllar. Both Javier Pérez and Gro Harland Brundlandt were members of the Rockefellers' Club of Rome.

The Report Stated:

“Excessive population growth diffuses the fruits of development over increasing numbers instead of improving living standards in many developing countries; a reduction of current growth rates is an imperative for sustainable development..... a nation proceeds towards the goals of sustainable development and lower fertility

levels, the two are intimately linked and mutually reinforcing.”

In 1987, off the back of the Brundtland Report, David Rockefeller was among the delegates of another conference organized by Strong. The [4th World Wilderness Conference](#), in Colorado. The Conference gave birth to the Rothschild backed Bank the [Global Environment Facility](#) (GEF – named in 1991,) initially as a subsidiary of the World Bank, who became a trustee partner in 1992, giving the GEF more independence. Announcing his idea, which had been kicking around in globalist think tanks for some time, following a glowing introduction from Strong, chairman of Banque Privée Edmond de Rothschild stated:

Edmond de Rothschild

“The concept of an international conservation banking program involves all sectors of the human community. Governmental and intergovernmental agencies, the public and private agencies, large charitable foundations, as well as ordinary individuals worldwide. By thinking forward as to how to reach out to the public at large, to every corporate entity throughout the world, to put aside, hopefully tax free, a part of their profits to fund our ecological and environmental protection. This international conservation bank must know no frontiers, no boundaries.”

Driven by their zeal to create a new global economic order, based upon

sustainable development goals (SDG's,) meaning population control, the conference was concerned with how to roll out this paradigm shift. Another delegate, Montreal banker David Lang, suggested the following approach:

“I suggest therefore that this be sold, not through a democratic process, that would take too long and devour far too much of the funds to educate the cannon fodder, unfortunately, that populates the earth. We have to take almost an elitist program, [so] that we can see beyond our swollen bellies, and look to the future in time frames and in results which are not easily understood, or which can be, with intellectual honesty, be reduced down to some kind of simplistic definition.”

Despite the fact that Mr Lang couldn't form a coherent statement, his elite sensibilities enabled him to empathise with the sentiments of those gathered. The cannon fodder's (human beings') existence was *unfortunate*. While the temptation may be to write Lang's outburst off as the aberration of an idiot, treating people like vermin appears consistent with the GEF's investment strategy. Which you [largely pay for](#) through taxation.

A primary function of the GEF is to establish protected areas (PA's) rich in biodiversity and maintain the geographical connections between them called *'biological corridors.'* Cannon fodder live in these places, so if you intend to *protect* the environment [the people have got to go](#). Coincidentally many of these regions also happen to be rich in mineral wealth and other natural resources. Which, unsurprisingly, is often the reason why people live in them. Perhaps it is purely by chance that the GEF backed projects frequently dovetail neatly with the objectives outlined in the Kissinger Report.

In India the GEF funded the relocation 89,000 villagers to newly designated *buffer zones* outside the PA's set up across rural India in the provinces of Nagarhole, Buxa, Gir and Pench. There's was virtually no public consultation and the first thing the cannon fodder knew was when the military turned up and threw them out of their homes. Seizing ancestral lands, the local government further restricted access for nearly half a million people in the surrounding areas, devastating the local economy, forcing many to relocate to urban areas. The Indian Ecodevelopment Project (IEP) was strongly resisted by the Adivasi people in Nagarhole who had been living there for hundreds of years. Many of whom

were beaten up when they protested. They launched legal actions but were blocked by the Indian Government. Almost identical stories have followed similar GEF land grabs in Thailand, Gabon, the Philippines, Papua New Guinea, Cameroon, Tanzania and many other countries.

This was entirely in keeping, necessarily, with David Rockefeller's world view. Speaking to the Business Council of the United Nations in 1994 he recognized the advances that had reduced infant mortality and increased life expectancy. He then identified people being alive as a major problem:

David Rockefeller

“Ironically however, the very innovations that are making possible dramatic improvements in human wellbeing are also creating new problems which raise the specter of an alarming, and possibly catastrophic disaster to the biosphere we live in.....The negative impact of population growth on all of our planetary ecosystems is becoming appallingly evident. The rapid and growing exploitation of the world’s supply of energy and water is a matter of deep concern.....The United Nations can and should play an essential role in helping the world find a satisfactory way of stabilising the world population.”

David, father of six, had certainly done his bit to add to the population problem he had long considered a blight. As arguably the richest oil tycoon the world has ever seen, nor had he been shy about contributing towards the “*rapid and growing exploitation of the world’s supply of energy and water.*” The problems he had personally created were seen by him, and his fellow parasite class contributors, to be the fault of the unfortunate cannon fodder. Whose numbers, rather like the wild deer populations, needed to be *stabalised* (culled) in order to protect their planet.

The Overpopulation Myth

Just as the AGW hypothesis is supposedly a scientific certainty today so the Club of Rome’s publication the *The Limits To Growth* was rooted in the scientific certainty its time. In 1968 the biologist and ecologist [Paul Ehrlich](#), and his wife Anne, published *The Population Bomb*. They warned that the growing global population could only lead to disaster. They predicted famine, economic collapse, war, pestilence and climate change as a consequence of uncontrolled population growth. The solution they suggested was a global government administered program of [population control](#).

Paul R. Ehrlich

Celebrated the world over for his contribution to science, Paul Ehrlich's post *Population Bomb* career has been marked by a never ending stream of scientific accolades, lofty advisory positions and academic leadership roles. His ideas, based purely in science of course, have presented some challenging concepts. For example, in an Interview with the [New York Times](#) in 1969, he said:

“Government might have to put sterility drugs in reservoirs and in food shipped to foreign countries to limit human multiplication.”

Writing with his co-authors & wife, Club of Rome member Anne Ehrlich, in [Ecoscience](#) in 1977, the Ehrlichs and John Holden, while promoting forced abortion and the like, outlined how a global government must control all of the Earth's resources, manage population and control global trade.

The only problem is that Ehrlichs, and all who agreed with them, were provably wrong about everything. Their predictions, that the 1980's would see 4 Billion people starve to death or that England wouldn't exist by 2000 for example, have all been rubbish. Not only are their prediction silly, but the academic and scientific basis for their various lunatic theories are [complete drivels](#).

Today we see the same kind of spurious prophecies from those who are certain

about the AGW hypothesis. For example the Maldives were supposed to have [vanished by now](#); Al Gore was among the many alarmists who told us that forest fires would increase because of climate change, yet, during the period of the most intense '*global warming*,' over the last few decades, the data shows that the total area of forest fires [has decreased](#); we were told that Hurricane frequency would dramatically increase yet no marked trend is notable at all and U.S landfall hurricane frequency between 2005 and 2016 [dropped sharply](#).

The climate alarmism pumped out [by the MSM](#) doesn't bear scrutiny. Similar doomsday narratives were common in the wake of the Ehrlichs' apocalyptic forecasts. Unlike the bulk of humanity, rather than just accept their pronouncements as fact, the experimental psychologist, business economist and statistician [Julian Simon](#) thought he would actually check the data to see if there was any basis for the Ehrlichs' wild proselytising. What he discovered was that the Ehrlich's view of human beings as little more than a drain on precious natural resources entirely overlooked an inconvenient truth (from an Ehrlich supporter's perspective.)

Human ingenuity is the fountain of all scientific, technological and social advancement. The more people there are, the greater the talent pool. The more scientists, engineers, philosophers, teachers, doctors, academics, farmers, nurses and labourers that exist, the higher the productivity and efficiency. Population growth, far from being the harbinger of doom, has consistently been the catalyst for economic improvement and technological advancement.

Ester Boserup

The Ehrlichs' work was based upon ideas first propounded by the 18th Century economist Thomas Malthus. He suggested that a growing population would inevitably outstrip global food production, leading to devastating famine. At the time the global population was approximately 800 million. Today it stands at 7 billion. Overpopulated by 5.5 billion people, according to the Ehrlichs. However food production has outstripped population growth, as predicted by the Danish economist Ester Boserup. Based upon empirical data, it is Boserup who appears to have [been right](#).

[For example](#), since 1970 the population of India has more than doubled, from 550 million to around 1.2 billion today. Yet famine has reduced, millions have been lifted out of poverty, the middle class has expanded significantly and life expectancy has increased from 49 to 65 in the same period. This trend has been reflected globally. Between 1960 and 2016 global population has more than doubled. Yet we see less hunger, less disease, less poverty, improved access to education, higher standards of public health, immense technological innovation and an expanding global economy.

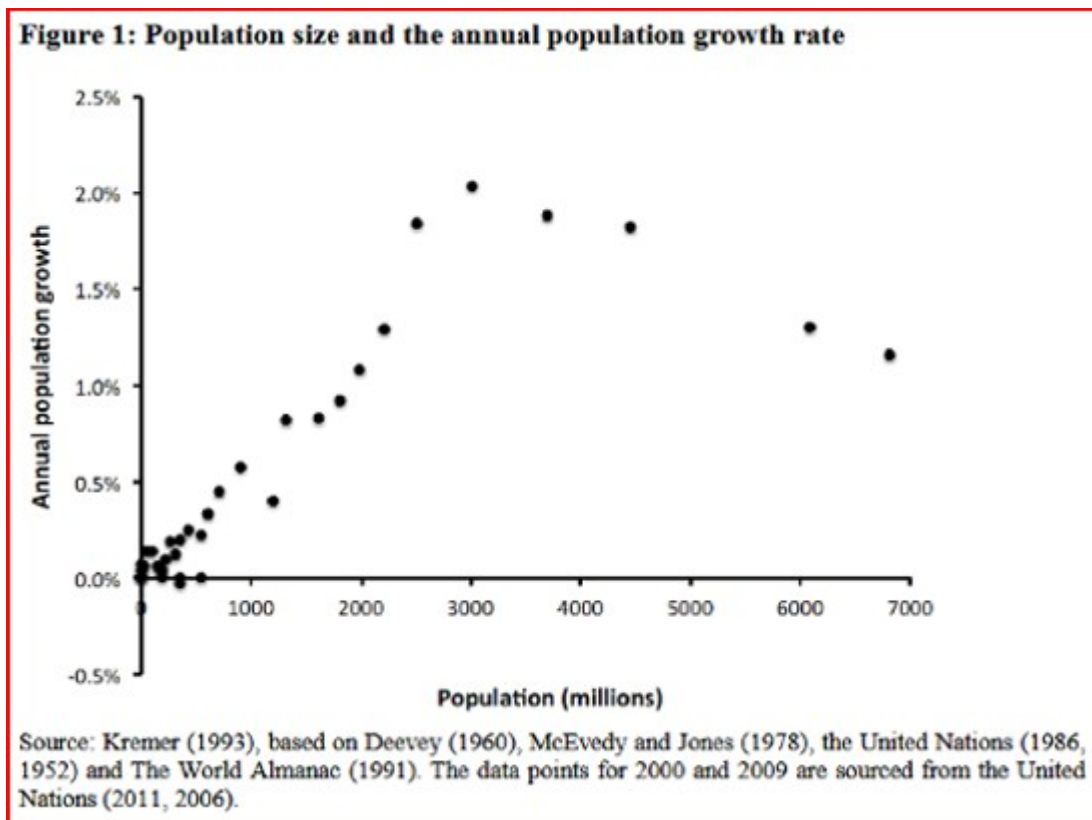

Furthermore, the evidence clearly shows that while population has continued to

grow the rate of that increase has been steadily in decline for decades. Bluntly, given the marked improvements in societal wellbeing, there is no evidence at all that fears of overpopulation are even remotely justified. By every measure, reality proves the theories of Ehrlich (and many others) almost perfectly wrong in every regard.

However, if you ask most people if global population and resource scarcity is a problem they will probably say yes. Simply because this is what they have been repeatedly and consistently [told to believe](#). It is the underlying truth accepted by the vast majority, regardless of the fact that it is unmitigated nonsense.

The real demographic problem faced by humanity has largely been caused by policies based upon the overpopulation myth. In 1969, stemming from Ehrlich's work, the [United Nations Fund for Population Activities](#) came into being. They have since disavowed themselves of any connection with China's disastrous '*one child policy*' despite being [heavily involved](#).

Following the application of their brutal population control policy, wholeheartedly endorsed by the Ehrlichs and supported by the U.N, China are now faced with demographic nightmare. The male population far exceeds the female population, the working age populations has collapsed while the retirement age group ballooned by comparison. In 2014 the Chinese government were forced to acknowledge that their working age population is now in decline. The same problem is faced [across Assia](#) the U.S, Central & South America and Europe.

Global birth rates have [dropped alarmingly](#), seemingly with [no clear explanation](#). The problem is not the uncontrolled growth of populations, it never was, but rather the aging population. Primarily it seems, as a result of catastrophic attempts at *population control*.

Again coincidentally, just as the IPCC released their Summary For Policy makers and Extinction Rebellion formed, as Greta Thunberg was launched onto the global stage and the MSM started changing language from *climate change* to *climate emergency*, the Club of Rome released their '[Climate Emergency Plan](#).'

Call To Action 9 is called "*Ensure That Population Growth Is Kept Under Control.*" Blind to all evidence, the Club of Rome's obsession runs deep.

Despite the fact that the United Nations have been fully aware of [population growth rate decline](#), since 2000 at the latest, we are still told that population growth is a problem. They insist that population control, which has already proven to be a genuine threat to humanity, is [essential to achieve Sustainable Development Goals](#) (SDG's.)

Why? Why are the Club of Rome, the U.N, IPCC, IPBES, WWF, World Economic

Forum, World Bank, IMF, Greenpeace, Extinction Rebellion, Greta Thunberg and the vast majority of people who live in the developed world, determined to assert an unscientific, provably false claim that population is the problem? Where does this idea come from and how does it manifest within the *climate emergency*?

A Climate Emergency Fit For A Parasite Economy

As we have [previously discussed](#), the climate emergency is really about the intentional transformation of the global economy. The current economic system is teetering on the brink of disaster. This threatens the powerbase of the parasite class and it is this which is unsustainable, not the planet. Their problem they faced was how to get the global population to accept a radical economic shift. One that would also mean the centralised control of everything.

Pondering this conundrum, in 1991 the Club of Rome published the [First Global Revolution](#). In it they revealed how they resolved the sales pitch problem:

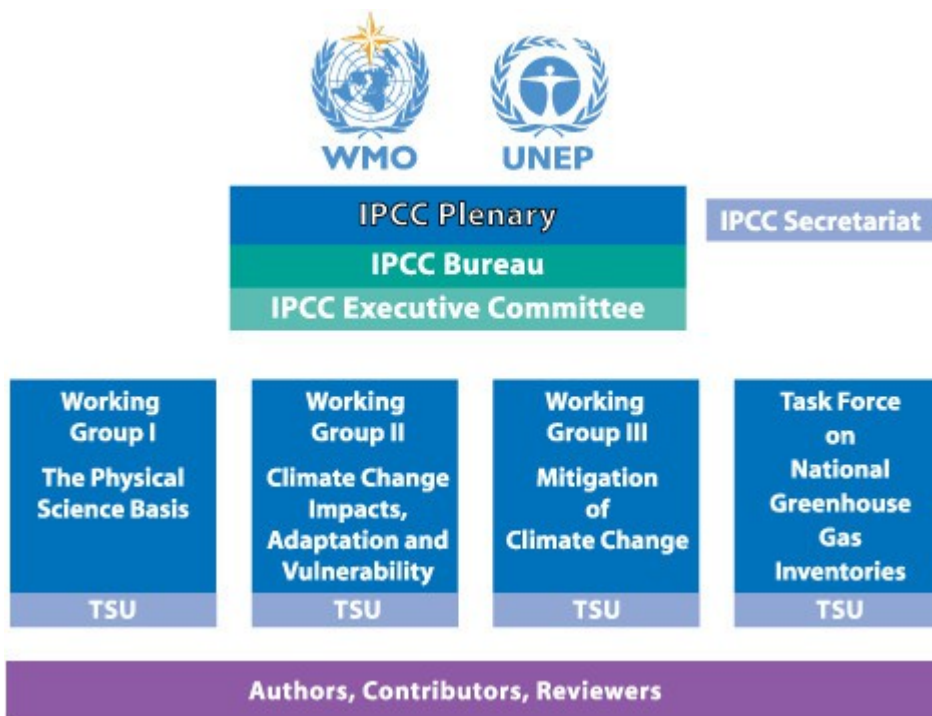

“In searching for a common enemy against whom we can unite, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill.... All these dangers are caused by human intervention... The real enemy, then, is humanity itself.”

Three years prior, in 1988, Club of Rome member Maurice strong was instrumental in the creation of the IPCC. It reports to the United Nations Framework Convention on Climate Change (UNFCCC) which sprang from the 1992

Rio Earth summit, also convened by Strong. The IPCC terms of reference, and its system of working groups, determine how it operates. It was not created to scientifically investigate the causes of climate change. Rather, it was formed with a specific, limited remit to promote one single hypothesis:

*“The role of the IPCC is to assess on a comprehensive, objective, open and transparent basis the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of **human-induced climate change**, its potential impacts and options for adaptation and mitigation.”*

The IPCC does not consider anything other than human induced climate change to be worthy of study. Solar Cycles, electromagnetism, atmospheric thermal gradients, ultraviolet radiation, x-rays, gamma waves, orbital variance, ion storms (space weather) and a whole range of possible climate controlling factors are of no interest at all to the IPCC.

IPCC Working Group 1 (WG1) assesses the scientific aspects of climate change, but only if it relates to the AGW hypothesis. All the scientific evidence which question AGW is discarded. Working Group 2 (WG2) then use the science contained within WG1’s scientifically restricted Assessment Reports to determine global vulnerability to the assumed effects of the AGW hypothesis. Working

Group 3 (WG3) then assess how they can reduce CO2 emissions, because they only consider AGW. This is called '*cherry picking*' your data and is not usually a valued component of the scientific method.

Every 5 years or so WG1-3 submit full Assessment Reports. These are collated to form the [Summary For Policy Makers](#) (SPM's.) The first draft of the SPM's are submitted to governments for their approval before they are published. This is essentially a policy document issued by the governments, who fund the IPCC and provide all the data sets for its *climate models*. It was the IPCC's [fifth SPM](#) which supposedly encouraged the formation of Extinction Rebellion, scared the wits out of Greta Thunberg and her followers, and caused the world to tremble with fear. As we only have 12 years left to *save the Earth* again.

According to the IPCC, based upon their single minded advocacy of the dodgy AGW hypothesis, the impending apocalypse is our fault. We just have to accept the new world economic order if we are to survive. "*The real enemy, then, is humanity itself.*"

James Corbett's meticulous research in the two excellent documentaries, [How and Why Big Oil Conquered the Earth](#), evidence the parasite class' historical belief in the pseudoscience of Eugenics and the social engineering concept of Technocracy. Eugenics, the quasi fascist scientific certainty of the early 20th century, and Technocracy, a belief that global society should be managed by a global *Technocratic* elite, have been consistently supported by the parasite class for generations.

Population control, though dressed in the fake respectability of sustainable development goals, is a Eugenic concept. The Internet of Things, built upon a global [5G monitoring grid](#), enables the Technocratic dream of real time comprehensive energy surveillance, a continuous registry of the [total net conversion of energy](#). Unsurprisingly, this too is a vital component of [sustainable development goals](#).

The *climate emergency* is the claimed rationale for the largest global power grab in human history. It is a globalist construct, based upon highly questionable science, designed to steer the world towards a new global economic model based upon units of energy consumption. It is the perfect coalescence of the Eugenic

and Technocratic belief systems deeply rooted in the global culture of the [parasite class](#).

Climate Change activism, alarm and subsequent reactive policies are controlled by governments who are themselves beholden to the existing [economic system](#) controlled by the parasite class. It has been generations in the making and has incorporated all sectors of society. As prominent U.S propagandist [Edward Bernays](#) said:

“The conscious and intelligent manipulation of the organised habits and opinions of the masses is an important element in democratic society. Those who manipulate this unseen mechanism of society constitute an invisible government which is the true ruling power....”

This is not what the decarbonised economy is about

We don't have to search far to see what the new decarbonised global economy will look like. The [Climate Bonds Initiative](#) aims to create the largest capital market in history. A \$100 trillion bond market to invest in sustainable development.

Currently global interest rates are [extremely low](#) and yet, at the same time, the Climate Bond Initiative is offering between an 8% – 12% yield on venture capital

investment. How can this be possible?

The answer is that the green initiatives it invests in are heavily subsidised by the tax paying *cannon fodder*. The system of [environmental taxation](#) is used to subsidise the inefficient green technologies and damaging projects the Climate Bond Initiative offers to investors. The tax payer is commodity being traded.

This will do nothing to effect climate change, as that is completely beyond human control. However, it will destroy small to medium size businesses, stifle innovations and limit human freedom. None of that matters to the parasite class as their new bond market continues the age old tradition of transferring wealth from the population to them. We only need look at the [funders of the Climate Bond Initiative](#) to see who benefits.

This is the new global economy of decarbonised sustainable development. It is what climate activists are actually campaigning for. They just don't know it.

It is beyond ironic that one of the oft cited accusation against the "*climate science deniers*" is that they are in the pockets of the big polluters.

As usual, the truth is the exact opposite.

Chapter 4

Recently we have all been asked to celebrate the youthful commitment to 'save the planet' personified by the [Youth Strike 4 Climate](#).' Hundreds of thousands of children, across the world, have been involved in various forms of strike action in protest against humankind's heating of the planet through our CO2 emissions. Many were given leave from their lessons to 'demonstrate.' This has been widely welcomed by the political class. Jeremy Corbyn, Caroline Lucas and Nicola Sturgeon were but a few of the leading politicians supporting this [coordinated day of action](#).

Particularly delighted was the President of the EU Commission Jean Claude Juncker. He tweeted his support and committed a quarter of the EU's annual budget for programs to 'mitigate' against man made climate change. That's an annual expenditure of more than €36bn, based upon [the EU's 2015 figures](#). As ever with the EU, it is difficult to know precisely how much of your tax money they spend or where they spend it. They haven't independently audited their budget accounts for more than 20 years, preferring their own ['in house' auditors](#). Wouldn't we all?

While mass absenteeism presented a bit of a problem for schools, who should record a child's absence for any reason other than illness as 'unauthorised,' the National Association of Head Teachers (NAHT) union were also supportive. Despite some 'official concerns,' clearly there was tacit acceptance of the strike from government education departments around the world.

All of which begs some interesting questions. Whose idea was it that schoolchildren [as young as 5 yrs old](#) should get involved in political protest? Who coordinated the 'day of action?' What were they protesting for (or against) and, most importantly, who funded it and why?

Whose Idea Was It?

Allegedly the *YouthStrike4Climate* came about largely due to the efforts of 16yr old Swedish schoolgirl [Greta Thunberg](#). Greta staged her own school day walkout and formed her solo picket line outside the Swedish Parliament in the lead up to Swedish elections. Just two days before the elections, and only two weeks after starting her solitary protest, international media organisations the world over, such as [the BBC](#), were already extolling the virtues of her 'struggle.' An incredible piece of global media manipulation by one so young.

Greta's achievements are truly staggering. Not only has she delivered a moving Ted Talk (owned by Chris Anderson's tax exempt Sapling Foundation, whose publishing company Future plc apparently settled out of court for [violation of U.S online child protection laws](#)) but also gave an 'educational talk' to the United Nations at the COP24 climate change summit. Her international government connections and use of social media to spread her message around the world is incredible. Especially seeing as she was just 15 when she began her protests. In the 8 months since opening her Twitter account (in June 2018), she has amassed 195,000 followers and her various videos have been shared millions of times.

Get "We Are Slaves" Right Now.

Perhaps her amazing global reach is understandable when we consider that Greta's rapid emergence upon the World stage didn't just 'happen,' but rather appears to have been carefully coordinated by grown ups. Her initial protest fortuitously coincided with the publication of her mother's book. Greta's mum, the opera singer Malena Ernman, worked with PR man Ingmar Rentzhog, who promoted her publication.

Rentzhog, coincidentally, launched his climate change social media campaign group "We Don't Have the Time" [the same day](#) that Greta first started her protest. Making a tidy sum along the way.

Greta's Mum & Dad

Greta's father, Swedish actor Svante Thunberg, said that the family knew nothing about Rentzhog's use of Greta's campaign to bring attention to his new lobby group. Surprising that Rentzhog never mentioned it to him when he was promoting his wife's book. However, Rentzhog skill in [public relations](#), and status as one of multi-millionaire venture capitalist Al Gore's '*climate network leaders*,' possibly helped to get Greta's message out.

Just like all the other hundreds of thousands of children involved, I have absolutely no doubt that Greta is genuine in her concerns about the planet being destroyed by human beings' CO2 emissions. How could she believe otherwise? She is among the millions of schoolchildren who have been brought up to believe this [scientifically illiterate gibberish](#).

The problem is, at the time, Greta was a child who was predominantly reliant upon what she was told by her parents, the media and her teachers. Greta seems like a very intelligent young lady, so I am sure she is more than capable of critical thought. However, unless she has access to information, she has no hope of ever exercising any. That basic human right appears to have been stolen from her.

Greta, and millions of children around the world, have been more or less compelled to accept that the 'science is settled.' There is [no debate](#) and all the world's leading climate scientists agree that CO2 emissions are the main contributor to global warming. They have no chance of ever knowing this is complete tosh, because no one will ever tell them about the [thousands of scientific papers](#) which disagree.

This is because children are not being educated, they are being indoctrinated. They are not encouraged to explore all available evidence, ask searching questions or form their own opinions. They are simply being inculcated into the new religion. Anthropogenic Global Warming (AGW.) CO2, which is plant food, must be abolished.

Who Coordinated the Strike?

The mainstream media promoted the children's day of action as if it were [some sort of spontaneous upwell](#) of youthful activism, inspired by Greta's lone struggle. This suggestion was complete nonsense. You don't launch a coordinated global event in a matter of weeks simply by posting a few memes on Twitter.

The Youth Strike for Climate was backed by a network of environmentalist and radical political lobby groups. [Fridays For Future](#) which is pushing for implementation of the Paris Climate Agreement, widely promoted the strike. They claim to be a 'grass roots' movement inspired by Greta. This doesn't appear to be true. Further investigation reveals a network of powerful interest groups behind the organisation.

Addressing the issue of children absenteeism from school, the Friday's For Future website states.

"Why are kids striking?"

School children are required to attend school. But with the worsening Climate Destruction this goal of going to school begins to be pointless.

– Why study for a future, which may not be there?

– Why spend a lot of effort to become educated, when our governments are not listening to the educated?”

The message being rammed into the children’s minds by schools, media and even parents is clear. Unless the world does ‘something’ about climate change, they are going to die. There’s no point going to school because it won’t be there.

On its Facebook page ‘Fridays For Future’ states:

“The world is finally waking up. Millions of young people are realising it’s now or never and are looking to take direct action on the climate crisis.”

So come on all you terrified 5 year olds, It’s time you took up arms against your oppressors. You need to save the planet by pushing pensioners into fuel poverty.

In turn, ‘Fridays for Future’ is partnered by the UK Student Climate Network (UKSCN) who are linked to a number of organisations including Green & Black Cross and Greenpeace. [Green and Black Cross](#) have provided the children with some excellent advice. For example they advise them how to respond to the police, what to do if they get arrested and discuss the legitimacy of stop and search powers. Essential knowledge when you’re swatting for exams.

Similarly Greenpeace, renowned for their ‘direct action’ approach, supported the children’s militancy. The original founder of Greenpeace, Patrick Moore, has been keen to point out that the modern agenda of the environmentalist lobby is based upon [sensationalism, misinformation, anti-humanism and fear](#), which is why he left the organisation he helped to create. Of course Greenpeace don’t accept this, though they are keen to send panic stricken children on forced marches to protest against climate ‘inaction.’

What Were The Children Marching For?

The Greta Thunberg complex, via their various media outlets and extensive list of international pressure group partners, are lobbying for the world’s governments

to fully implement the Paris Agreement. This is essentially what hundreds of thousands of children marched to promote.

The Paris Agreement emerged triumphant from the United Nations' Conference of Parties (COP21) summit in 2015. Based upon the 'science' pumped out by the Intergovernmental Panel on Climate Change (IPCC,) the unelected UN and EU bureaucrats stood shoulder to shoulder with the virtue signalling political class to announce how much more money tax payers must give them. Because, regardless of the questionable scientific justifications, the Paris Agreement is all about hoovering up peoples' earnings. Continuing the long standing neoliberal tradition of transferring wealth from the people to privately owned corporations. Or, as the [COP21 committee put it](#):

“making finance flows consistent with a low GHG (Green House Gas) emissions and climate-resilient pathway”

Based upon the questionable notion that human beings can control the temperature of the Earth (perhaps there's a [solar dimmer switch](#),) the Paris Agreement commits nation states to [Nationally Determined Contributions](#) (NDC's). Through these, countries submit their plans on how they are going to reduce GHG emissions and move towards a low carbon economy. Which, unsurprisingly, requires both a tremendous amount of investment and increasing energy costs. Thereby hiking up the energy providers profit margins.

This is entirely understandable because the climate change agenda has always been driven by two globalist principles. Firstly to steal as much money as possible from tax payers and secondly to hand central control of all Earth's natural resources to privately owned corporations and their major shareholders.

Impressionable minds like Greta's can then be convinced by the horrific propaganda of the IPCC to clamour for the imposition of climate taxes. Such as those announced by the [Rothschild banker](#) and President of France Emmanuel Macron, whose €8 billion fuel tax prompted the initial [Gilet Jaune](#) protests. Macron's tax is an example of the way in which climate 'mitigation initiatives' will be financed. This is the €36bn annual expenditure that Jean Claude Juncker is so enthusiastic about.

Has anyone ever told Greta that the Oil Tycoon and Rockefeller protégé [Maurice Strong](#) convened the first Rio Earth summit in 1992? Or that the oil / energy industry, through Strong and his corporate connections, were key in the creation of the United Nations Environment Program (UNEP?) Does Greta know the United Nations Framework Convention on Climate Change (UNFCCC,) from which the Paris Agreement emerged, was formulated by globalist, venture capitalists? Probably not.

Along with the World Health Organisation (WHO,) UNEP, under Strong's leadership, also created the Intergovernmental Panel on Climate Change (IPCC.) Greta's, along with the other child protesters, faith in the IPCC, as a scientific body which supposedly researches the causes of climate change, is woefully misguided. In reality, nothing could be further from the truth. However, this isn't the children's fault. They are being deliberately misled.

As pointed out by climatologist [Dr Timothy Ball \(PhD.\)](#) when the Rockefeller backed oil tycoon Maurice Strong wrote the IPCC terms of reference, he stipulated that this supposedly objective scientific organisation could only consider AGW. No consideration of natural drivers, such as solar activity or electromagnetic variance, can possibly be investigated by the 'worlds leading experts on climate change.' Strong's terms of reference stated:

“The role of the IPCC is to assess on a comprehensive, objective, open and transparent basis the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change.”

Strong further ensured IPCC research was strictly limited to *“human induced climate change”* through the way he established the system of IPCC 'working groups.' Each group is required to write an assessment report (AR.) Working Group 1 (WG1) scientific findings are tightly controlled by Strong's terms of reference then Working Group 2 (WG2) takes 'the science' from WG1's assessment and tries to predict the vulnerability of socio-economic and natural systems to AGW. However, because the science is extremely limited, their 'computer model' based predictions are based on little more than assumption. Working group 3 (WG3) then adsorbs the drivel created by WG2 and uses it to imagine nonsensical ways of mitigating the impacts of AGW. They state:

“Climate change mitigation is achieved by limiting or preventing greenhouse gas emissions and by enhancing activities that remove these gases from the atmosphere.”

A definition of immeasurably expensive ‘mitigation’ which completely ignores [all the evidence](#) to the contrary.

The IPCC are confident this has no effect on climate change.

Objective science cannot be limited by an agenda. If it is then it is neither scientific nor objective. Each working group’s Assessment Reports are solely focused upon AGW. If the objective is to understand the process of climate change, this makes no sense whatsoever.

There is a wealth of evidence that the Earth’s climate is an extremely complex system which is determined by innumerable factors. Making predictions based upon a predetermined assumption of ‘cause’ is ridiculous. Something which [the IPCC admit](#).

For example, recent research by a team led by Professor of Mathematics Valentina Zharkova (PhD in Astrophysics) was able to accurately [predict solar cycles](#) and demonstrate the potential impact of an approaching Grand Solar Minimum on climate. However, because the IPCC consider AGW to be the only possible cause of climate change, they have nothing at all to say about the impact of the Sun on the Earth’s climate. Which renders their opinion on climate utterly meaningless.

Claims that the IPCC represent the world's leading experts on climate change are risible. All they represent are the world's leading proponents of anthropogenic global warming. An unproven hypothesis which doesn't stand up to any scrutiny.

Greta has no doubt been alarmed by the world's media who, after being issued with the IPCC's various 'Summary For Policy Makers,' unhesitatingly report the IPCC's catastrophic predictions. They then leap upon any 'science' they can find which supports the summary. Usually with farcical results.

For example a recent study published in the prestigious journal Nature, by researchers from Princeton University, claimed alarming ocean warming, further heating the climate and causing sea level rises. This was [widely reported](#) as further evidence of the impending doomsday. I'm sure Greta was scared witless.

However, unlike the MSM, who's 'science correspondents' never seem to check anything related to climate alarmism, when interested scientist Nic Lewis decided to actually review the Princeton paper he discovered they had got the [basic mathematics wrong](#). The average temperature rise appeared to be less than previous increases, not more. Suggesting a reduction of the energy uptake in the system. While MSM outlets prominently splashed the dire prophecies everywhere, the few who bothered to issue retractions relegated them to the obscurity of the minor pages. Thereby ensuring Greta, and thousands of other schoolchildren, remained both misinformed and fearful.

If the process of arriving at the various assessment reports, and the alarmism which follows, lacks scientific credibility, the Summary For Policy Makers (SPM) is completely devoid of any basis in science. It is decided by a [committee of politicians](#) called a 'plenary panel.' Supposedly based upon evidence, which is itself irrationally constrained, the political representatives of the world's governments decide on the wording of the report.

In other words, the IPCC is a political lobby group designed to promote one concept, AGW, to the exclusion of all others. An approach which is the antithesis of [the scientific method](#).

Greta, and the hundreds of thousands of protesting children inspired by her [PR team](#), had absolutely no idea at all that they were marching to promote an

economic agenda, designed by multinational corporations. This agenda is based upon spurious scientific evidence, is advocated by compliant political puppets and aims to increase taxation and consolidate control of resources.

Very far indeed from 'saving the planet.'

Who Funded the Child Protest and Why?

Greenpeace is the richest environmentalist lobby group in the world. Among its major donors are [the Tides Foundation](#). Established in 1976 by Drummond Pike, the son of a wealthy Investment Banker, who could therefore afford to invest his life in activism, the Tides Foundation and Pike have somewhat murky backgrounds. In 2008 it was revealed that Pike paid back nearly \$1m that fellow Tides Foundation board member Dale Rathke had allegedly embezzled from the Association of Community Organizations for Reform Now (ACORN.) Why he did this remains unknown.

Due to their tax exemptions, the Tides Foundation can withhold information about where their donor's money is directed but, given that Greenpeace list them as a major contributor, the evidence suggests that a number of those donors contribute to Greenpeace and, subsequently, Fridays for Future and Strike4Climate. Follow the money and we find out who was behind the child protest.

The Open Society Foundation (OSF) is the tax haven slush fund off the billionaire globalist, venture capitalist George Soros. It is a major Tides donor. The bulk of Greenpeace funding comes from unnamed, private donors. However, Greenpeace were [instrumental in coordinating](#) the 2017 'Peoples Climate March,' to which Soros was a [major contributor](#). Soros is a significant 'individual donor' to a variety of environmentalist causes. He is also invests heavily in the [fossil fuel industry](#), is a [convicted fraudster](#) and a leading member of the eugenicist 'think tank' the Club of Rome.

Another Tides contributor is the Ford Foundation. It was established as a tax write off by well-known fascist sympathiser and eugenicist Henry Ford in 1936. It

has collaborated extensively in population control initiatives with the Rockefeller Foundation. They began their involvement in the Environmentalist Movement in the 1960's.

Similarly the Rockefeller Foundation (RF) contribute to the Tides Foundation. RF invests heavily in 'renewable energy' and 'education' and is one of the tax avoidance vehicles used by the globalist bankers, the Rockefeller family. It was the Rockefellers who formed the Club of Rome and have long argued for ['population control.'](#)

In fact, rather like the AGW hypothesis today, eugenics (racial supremacy) and population control (which means depopulation) were widely accepted as 'settled science' for much of the 19th and 20th century. The link between the eugenicists and the environmental lobby was firmly established by Maurice Strong in his [opening speech at the 1992 Rio Earth summit](#). Speaking about global population growth he said:

“Central to the issues we are going to have to deal with are:the explosive increase in population, largely in the developing world.....this growth cannot continue. Population must be stabilized..... “

Strong was clearly indicating his belief, shared by many of the billionaire philanthropists who fund climate change alarmism, that the world's human population needs to be culled. However Strong's ideas were formed earlier when he was also a leading member of the Rockefeller funded "Club of Rome" (CoR).

In 1972 the ‘world’s leading climate scientists’ were all warning the world about the coming Ice Age. However, Strong and his fellow CoR members, like Henry Kissinger and David Rockefeller, were already planning for global warming. In their report called ‘The World’s First Revolution,’ the CoR wrote:

“In searching for a common enemy against whom we can unite, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill.... All these dangers are caused by human intervention... The real enemy, then, is humanity itself.”

Essentially the globalists like Strong, David Rockefeller and latterly George Soros, are seeking to establish the [New World Order](#). Something they have spoken about at length in numerous interviews. For them, the NWO is single, global system of financial control which manages all of the Earths resources under their unelected leadership. They have long used the [unsubstantiated hypothesis](#) of AGW to advance their globalist, eugenic agenda. This is why they created the UNEP, UNFCCC and the IPCC.

The Paris Agreement set up the NDC’s are to be implemented at the local level through Agenda 2030, using the [U.N’s Sustainable Development Goals](#) (SDG’s.) These aim to place control of food, water, air, land, sea, energy, government, economy, gender and health in the hands of the [international banking cartel](#). Wherever you live on Earth simply Google (or better, [Startpage](#)) “Your Home Town” + “sustainability” and you will quickly find the impact of Agenda 2030 on your local community.

Co-opting children to advance your totalitarian political agenda is nothing new. Hitler, another eugenicist, had his [Hitlerjugend](#) and Stalin his [Komsomol](#). The objective is always the same. To brainwash the youth with your ideology in order to eliminate all dissent against your absolute rule within a generation. The methods never change either. Provide the children only with the carefully selected information that supports your agenda and tell them that anyone who opposes your self serving world view is either dangerous, stupid or both. As the children mature their radicalisation can then be employed to enforce your policy agenda. By force if necessary. By the time they become adults, through strict control of education and the media, most will have no idea that other opinions, or counter

evidence, ever existed.

Sadly, while Greta and her global army of child protestors, have acted from nothing but the very best of intentions, they have been ruthlessly exploited to advance the globalist ambitions of multinational corporations. It isn't their fault.

The same cannot be said for the adults who blindly accept everything they are told, without any critical thought. Propelling the children, and the rest of us, into a dystopian control grid.
